Health Service of the Canadian Medical Association

APPENDICITIS

Appendicitis is a public health problem because the public need to be told of the early symptoms so that they may promptly secure proper treatment which will greatly reduce the present death rate from this disease.

In the majority of cases, appendicitis causes a condition that a physician will readily diagnose. Pain towards the centre of the abdomen followed by nausea and vomiting, is usually the first symptom. The pain varies in intensity; it may be of a griping character. Later, the pain usually moves to the right lower part of the abdomen, and the abdominal muscles in that part become hard and tense. This is Nature's effort to protect the inflamed part.

When any person—child or adult—has pain in the abdomen, even when the pain is not accompanied by nausea or vomiting, the family physician should be sent for at once. The only satisfactory treatment for appendicitis is operation. The chance of recovery practically depends upon the interval of time between the onset of symptoms and the operation. To delay in securing prompt treatment is to gamble with life itself.

There is one thing in particular that will do a tremendous amount of harm and that will, in most cases, greatly lessen or take away the chance of recovery, and that is the use of a purgative or laxative.

No person, when suffering from abdominal pain, should take or be given a purgative or laxative unless ordered to do so by a physician. The loss of bowel movements is not going to do any harm, whereas the actively stirred up by a purgative, when nature has kept the bowel quiet on account of an inflamed appendix, may be disastrous.

Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions on diagnosis and treatment will not be answered.

Cards of Thanks

Mr. and Mrs. T. C. Crawshaw wish to thank the Ladies' Aid and Women's Institute, Mr. and Mrs J F Armstrong, Mr. and Mrs G R Farquarson and Mrs Hamilton for the beautiful flowers; also the Rebekah Lodge for the lovely plant sent to Mrs. Crawshaw while a patient in the Craigmyle Hospital."

Mr. and Mrs. S. A. Elliott wish to thank the Delia Women's Institute and Ladies' Aid, also Mrs. Fred Millicsted for the beautiful flowers, and all those who sent letters and made enquiries of Mrs Elliott during her recent illness in Drumheller Hospital.

The Delia W. I. G. C. wish to thank Mr. and Mrs. Thompson for the use of the old post office last Saturday, in which we held a very successful tea.

The Delia Junior Institute and Supervisor.

Craigmyle News

On Sunday last the anniversary services of the United Church were held, Rev. J. V. Howey, B. D., of Munson, being the special preacher for the occasion; and the service at Surprise School in the forenoon had the assistance of the local girls' choir, also at the evening service in the auditorium. Good congregations were present at both services. Rev. Mr. Howey dealt with the deliverance of Peter from prison as narrated in Acts 12 as the subject of his address, which was most attentively followed by a large congregation.

On Monday evening the annual chicken supper was served by the Ladies' Aid in the Church basement, and the large turnout did ample justice to the excellent fare provided. After the supper Rev. J. H Garden, B. A., B. D., Bankview, Scarboro United Church, Calgary, gave an illustrated lecture on Scotland, and kept his audience thoroughly interested.

On Saturday evening last on the north road about three miles out of town a nasty accident happened, when a loaded grain truck coming into town, and a Chevrolet car going north from town, failed to clear each other. W. G. A Kolignon, the driver of the car, was badly cut about the face and was brought into town by A. C. Clayto, who arrived on the scene shortly after the accident. Dr. Crawford attended to Kolignon's injuries and had him taken to the local hospital, and we are pleased to state that they are not serious. R. Etherington, the driver of the truck and two passengers, also three passengers in the car, were fortunately not injured. The car was practically a total wreck, and the truck was damaged considerably.

Now that threshing is getting along towards completion it is abundantly evident that the much boasted bumper crop has been very much harder hit by the frosts that occurred in August and early September, than was hoped. There are many severe disappointments, but when it is finally reflected in the price of wheat the loss may not be so severe.

At present there is a decided shortage of grain cars, but as the same condition prevails at all non-competitive points it is more easily endured.

J. A. Coulson recently met with a very nasty accident to his eye while threshing. A piece of straw penetrated the right eye, and he has been under the care of Dr. Crawford for several weeks, but we are pleased to report that he is now progressing favorably and is now out of hospital.

Springwater School Fair

The following is the continuation of prize-winners of Springwater School Fair :—

Model of Onion, Class 37
1. Irene Street, Springwater

Business Summary

[Issued by the Bank of Montreal]

The prospect of excellent Autumn trade is being fully realized in virtually all departments and the general situation presents few weak spots. To this end is wheat harvest abundant beyond any previous one has greatly contributed. The yield of this cereal will exceed that of last year, according to official estimate, by the large quantity of 110,000,000 bushels, and should the estimate prove excessive, it is now certain that the previously largest harvest, that of 1923, 474,200 000 bushels, will be substantially surpassed. The crop has been safely gathered and threshing well advanced. The price of wheat has, indeed, dropped, the decline being as much as 20 to 25 per cent, but against this recession is to be set an increase of 25 per cent in yield as well as generally higher grades, so that the monetary value of the crop should not widely vary from that of last season. The central and eastern provinces have had field and fruit crops well up to the average, and the fundamental source of commercial prosperity being found in the land, the outlook is reassuring for unabated activity in all branches of industry, trade and transportation. In this connection the increasing use of machinery on western farms is noteworthy, since by this means reaping and threshing are effected more expeditiously and economically, and the risk of loss from inclement weather reduced.

Financing the crop has never been a serious problem under the Canadian banking law which permits of seasonal emission of notes for this purpose, and with the cooperation of the Minister of Finance the means of extending needed credits are available. It was so a year ago, and big as is this season's harvest, its purchase and movement to market will be financed without undue restriction in the supply of money necessitate accommodation.

The upward trend of foreign trade continues, imports in August having risen $13,409,000 and exports $18,277,000 over and above the corresponding month a year ago. In the first five months period of the fiscal year continuous expansion of foreign commerce of Canada has occurred since 1924, now the high water mark of 1920 has practically been reached, the aggregate that year having been $1,052,281,000 and this year $1,041,078,600. The fall in commodity prices must, however, be taken into account to appreciate the significance of the trade recovery, this item reaching little less than 40 per cent, so that in volume current movement of imports and exports greatly exceeds that of any previous period in the history of the Dominion. Satisfactory, too, is the maintenance of a favourable balance of trade.

The increase in August exports was principally in wheat, of which 25,057,000 bushels of the value of $30,347,000 were shipped abroad, being an increase of nearly 13,000,000 bushels in quantity and $11,763,000 in value. The export of newsprint was also of greater moment by $797,000, 151,000 hundredweight fell to $3.19 from $3.27 in August last year. Another important item of export trade, automobiles and parts advanced more than 50 per cent to $6,495,000 from $2,411,000 twelve months ago.

Whatever index may be taken, with few exceptions, business is found to be still on the upgrade. In the case of car-loadings, for instance there was an increase of 37,323 cars in the four weeks to September 8th over the like period a year ago, and while much of this gain arose from large wheat shipments, the movement of general merchandise was greater by 2,435 cars. So with bank clearings, which in August were larger in every one of the 29 reporting centres save only two, and in these latter the recession was so trivial as to be negligible. The latest returns of the chartered banks of Canada are of July 31st, and here again is shown enlarged activity, mercantile loans having expanded $151,550,000 within twelve months, and time deposits risen

Auction Sale

Of Horses, Cattle, Farm Machinery, Household Effects

On S.W. Qr. 25-32-17, W. 4

6 miles North and 2 miles West of CRAIGMYLE on the old Bell Cranston Farm.

On Monday, October 22nd, 1928

Sale starts at One o'clock sharp

30 Head of Horses, all well broken, mostly high-grade Percherons; 5 Head of Grade Holstein Heifers, coming 3 yrs.; due to calve about Feb. next; Farming Machinery, Household Furniture, Harness, etc. Terms—Cash. Free Lunch.

M. A. WUEBBENHERST, Owner. — W. E. FITZNIMMONS, Auctioneer, Hanna.

How to Reduce Varicose Veins

Rub Gently and Upward Toward the Heart As Blood in Veins Flows That Way

Many people have become despondent because they have been led to believe that there is no remedy that will reduce swollen veins and bunches.

If you will get a two ounce original bottle of Moone's Emerald Oil (full strength) at any first class drug store and apply it night and morning as directed you will quickly notice an improvement which will continue until the veins and bunches are reduced to normal.

Moone's Emerald Oil is a harmless, yet most powerful germicide and two ounces last a very long time. Indeed so powerful is Emerald Oil that old, chronic sores and ulcers are often entirely healed and anyone who is disappointed with its use can have their money refunded. All druggists sell lots of it.

Time to Plant

Currants, Gooseberries and Cherries—all bush fruits do much better planted in the Fall.

You can have Roses in bloom from July to November. We have three varieties that make good in any part of Alberta.

Hartman Nursery

There will be a bazaar held in Batson's Hotel, under the auspices of the Church of England Women's Auxiliary, on Saturday, October 20th, 1928. See advertisement in another column

Motor Trucks

REO—INTERNATIONAL

We are now in a position to supply International six speed special trucks.

Used Truck

One Chevrolet Truck, 1927 model, just overhauled, has new pistons and rings, new tires and tubes on rear wheels; complete with spare tire and grain tank.

Price, $600.00.

Phone 28 — **WM. GIBSON** — DELIA Alta.

The Progress of Canada

Canada is forging steadily, even rapidly, to the front among the nations of the world. In all things material it is making great growth. Its trade both domestic and foreign, is expanding as never before, and as a result every branch of industry is active. The country has just harvested one if the largest crops in its history; mining discoveries and operations are proceeding on an unprecedented scale, factories are working overtime, building operations in all provinces are reaching totals hitherto unrecorded, with the result that employment is general, wages good, and population increasing.

Important and gratifying as this material growth and prevailing prosperity is to our people, a much more vital matter to Canada is whether the Dominion is likewise making progress in those other directions which are essential to the upbuilding of a nation in the truest sense. Are the Canadian people becoming merely a nation of money-seekers, measuring their success in terms of dollars and statistics recording economic development and growth, or are they utilising the larger advantages and increased power which material prosperity is conferring upon them to encourage and develop those arts and characteristics which stamp a people as truly advancing to greatness?

We believe signs generally point to the fact that the people of Canada are, taken as a whole, more intensely interested today in the spiritual, intellectual, moral growth of their country than at any previous period; that, in fact, they are deeply concerned, and very determined that the national ideals and character shall grow to maturity on a high level.

The widespread interest in and discussion of the subject of immigration is but one manifestation of this spirit. Considered solely from a material standpoint it would probably pay Canada to enormously increase its population just as rapidly as possible. Economically Canada would probably gain by absorption by the United States. But Canadians are insistent that quality rather than quantity shall be the governing factor in our immigration policies and it would be hard to find a more general grant of outstanding men who favor the policy of United States annexation.

Throughout Canada increasingly sympathetic attention is being given to the assimilation of the non-British people who come to make their Canadian family. Here and there people may adopt an unfriendly and unfair attitude towards these people, and to that extent retard the good work, but they are exceptions to the generality of Canadians. More and more it is being realized that these people have much to contribute in addition to the national life of Canada, bringing to us music, poetry, traditions and handicrafts which are enriching this Dominion.

The increased attention being given to musical festivals and symphony orchestras, to the establishment of art galleries and museums, to scientific research, to literature and the rapidly increasing number of libraries, and to the steady improvement in Canadian magazines and publications of a better class, all go to prove that the people of Canada are not wholly materially minded.

The wonderful success which has attended the application of co-operative principles to the solution of production and marketing problems, and to the provision of public services for the use of all the people, is having its inevitable effect upon the minds of all people. To an ever increasing extent they are beginning to realize that through loyal co-operation they can remedy material evils and advance their individual and corporate welfare, through the acceptance of the same principles and their application in many other directions they can remedy social evils, or they can greatly advance the welfare of the country as a whole.

Co-operation is better than competition or antagonism. Sympathetic consideration and helpful co-operation is better than suspicion and the maintenance of bitter animosities. In the practical work of co-operation the Canadian people are learning that there are two sides to almost every question, that people who may differ with you are just as sincere as you are, that there is ultimate success and the greatest good to the greatest number lies along the path of friendly compromise rather than in continual enmity and warfare.

Canada's progress is, therefore, a well balanced progress, and because of this gratifying fact the people of the Dominion may look to the future of this very gratifying fact the people of the Dominion may look with unbounded confidence to the future if their great country.

How French Police Work

Use Soundless Whistles to Give Alarm to Headquarters

Policemen in most of the large French towns can summon help without sound. They are supplied with whistles whose notes are far too high-pitched for the human ear to detect. The inaudible sound waves are picked up by microphones skilfully camouflaged throughout the city, and an alarm is flashed to central police headquarters.

A policeman who sees a burglar at at work can summon reinforcements without alarming the suspect. He can, too, direct the sending of aid in Morse code by using the soundless whistle.

Becoming Great Industry

Tourist Trade is Not Far Behind Wheat Exports

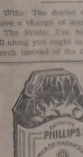
The Federal bulletin, Natural Resources, puts in a graphic way the remarkable growth of what it describes as "a new giant of Canadian business," having the second among five. These are Canada's wheat exports, valued last year at $399,624,000, expenditures of tourists from abroad estimated at $275,000,000; mineral production, $244,520,000; pulp and paper mills, $219,328,000, and building permits $154,815,000. A few more years and our tourist trade will be our greatest asset!

Tourists Aid Development

The tourist is often the forerunner of the homemaker and investor. He visits the country and sees with his own eyes the character of its people and resources, and if he later returns to settle or invest he is able to do both in a more satisfactory manner.

Mrs. Littlefoot — "Tilly, you've left my lingerie scattered all around this room and I'm expecting company any minute.

Tilly, the Maid — That's all right, ma'am, I'll keep my eye on 'em and see they don't pinch nothin'.



Reduce the Acid

Sick stomachs sour stomachs and indigestion usually mean excess acid. The stomach secrets are over-stimulated. Too much acid makes the stomach and intestines sour.

Alkali kills acid instantly. The best form is Phillips' Milk of Magnesia, because one harmless, tasteless dose neutralizes many times its volume in acid. Since its invention, 50 years ago it has remained the standard with physicians everywhere.

Take a spoonful in water and your indigestion usually ends excess acid. The stomach secrets are over-stimulated. Too much acid makes the stomach and intestines sour.

Alkali kills acid instantly. The best form is Phillips' Milk of Magnesia, because one harmless, tasteless dose neutralizes many times its volume in acid. Since its invention, 50 years ago it has remained the standard with physicians everywhere.

Milk of Magnesia preserved by physicians for 50 years in correcting excess acid. Each bottle contains full directions—any druggists.

Junior League of British Nations

Proposal to Form Branch of British Empire Parliamentary Association

"To the British Empire, at least, it would be a real junior league of British nations," stated Mr. A. MacPherson, M.L.A. for the Regina constituency, when speaking of the proposal of the government of Saskatchewan to consider the advisability of forming a branch of the British Empire Parliamentary association.

The Regina member further expressed his opinion that such an organization, having as it does, the aim of trying to bring the different nations and colonies of the British Empire into closer understanding and contact with each other, would most certainly be a splendid one for the province to adopt.

It is proposed that at the next sessions of the legislatures of the four provinces of Ontario, Saskatchewan, Alberta and Manitoba, this scheme be presented to the members of the respective assemblies and with their approval, the work of organizing such an association be definitely undertaken.

RHEUMATIC MISERY

Relief Can Only Come Through Better Blood—Liniments of No Use.

In no other disease does the blood become this so rapidly as in rheumatism. Not only does it become watery but it is loaded with impurities—rheumatic poisons. Without the proper treatment these poisons increase, the inflamed joints swell and the patient becomes a cripple. Most treatments simply aim to keep down the pain, but this only unfavorable condition a renewed attack follows.

To cast out rheumatism the blood must be purified and the rheumatic poisons driven out with the natural excretions of the body. This can best be done through a course of Dr. Williams' Pink Pills which have a specific action on the blood, giving it new richness and redness. Thousands have tried this treatment with benefit and results. That every sufferer from rheumatism who does not try Dr. Williams' Pink Pills is neglecting the most hopeful means of recovery is shown by the statement of Mr. David Duval, Perth, N. B., who says:—

"For years I was troubled with rheumatism. The pains were not continuous but would always return, and kept getting worse. I tried so-called electrical belts and other medicines, but did not get more than temporary relief. Only those who have suffered from this trouble will realize what I suffered at times. I had begun to despair of getting better when a friend urged me to try Dr. Williams' Pink Pills for Pale People. I could not find the medicine helping me so I gladly continued using it for my self and children found that every trace of the trouble left my blood and there was a great improvement in my general health. I am glad to say I can also look Dr. Williams' Pink Pills and I have not had the least twinge of the trouble in that time. That is why I confidently recommend the pills to other sufferers."

You can get these Pills from any medicine dealer or by mail at 50c a box from The Dr. Williams' Medicine Company, Brockville, Ont.

Winds Have Musical Names

But Many of Them Are Anything But Pleasant

The various winds which sweep land and sea, have some of them at least, very musical names. The wind that blows so strongly at times along the coast of France and ruffles the blue waters of the Mediterranean is called the Mistral. Another violent, cold wind is the Bora, which those who have been much on the northern coast of the Adriatic have experienced, greatly to their discomfort. Then there is the Simoom, which is an exceedingly hot as the Mistral and Bora are cold. The Simoom, in fact is like a violent succession of gusts from a hot oven. It has proved a horrific enemy to travellers in the Sahara. The Sirocco is much the same kind of scorching wind. Romantic-sounding enough is the name Khamsin, but those who have encountered this hot, dry wind in the Egyptian valley do not have very pleasant memories of it. The Harmattan is similarly unpopular among the inhabitants of Western Africa and those travellers who have been unfortunate enough to encounter this desert, dustladen wind. Fohn is the name of another dry, hot wind, which has an enervating effect upon the valley dwellers on the northern side of the Alps. The name of the Pampero has a glamor about it which belies it in reality. This fearful combination of violent wind, rain, thunder and lightning at only too familiar to the residents of the Argentine and Uruguay.

A Competent Witness

"Hey, that election is crooked." "How come?"

"Why, I went into the voting booth and saw Jim Freshy and Foy White stuffing the ballot box."

"What did you see that?"

"The third time I went in to vote."

Wife (before open grate): Listen dear, how fire is saying, "Pop, pop, pop, pop."

Hubby: Well, the grate's full of egg coal.

For years Mother Graves' Worm Exterminator has ranked as a reliable worm preparation and it always maintains its reputation.

Opening of Bay Route

Suggestion is Made to Hold Monster Excursions From All Parts of Canada

By way of establishing an "entente cordiale," W. Mary Thrusher, secretary of the United Farmers of Canada, Saskatchewan section, suggests that the opening of the Hudson Bay trade route to Great Britain be celebrated by a huge excursion from all parts of Canada, the mid-western states and Great Britain, the meeting place to be on the shores of the bay.

Mr. Thrusher also suggests that at the same time the Federal government should take steps to eliminate all trade restrictions with the Mother Country and bend every effort toward centralizing the huge purchasing power of western Canada in Great Britain, where, it was pointed out, western farmers sell the bulk of their products.

He believes that this would be the first logical step towards solution of western Canada's immigration as well as industrial problem, and that something should be done when the west is more closely linked with the Old Country by the opening of the Hudson Bay route.

"Western Canada sells its surplus products in Great Britain," he says "and accordingly should buy manufactured products there so as to close the circle. No country can successfully by selling to one market and buying from another. Someone will have to suffer. The lack of balance will eventually be felt."

Makes First Entry

Saskatchewan Farmer Makes Entry In Grain and Hay Show at Chicago

The distinction of making the first entry in the International Grain and Hay Show to be held at Chicago next December goes to Canada. James A. Paton, a farmer living near Saskatchewan, has entered samples of Marquis wheat and of rye. Canada always carries off a large share of the awards at the international show. In the last 17 years the Dominion has won the world's wheat championship 14 times.

The Oil for the Furnace—A bottle of Dr. Thomas' Eclectric Oil in the farm house will save many a journey to the doctor. It is the only remedy for the children when taken with croup and colds, for the grown-ups who suffer from pains and aches, but there is nothing like for its use on sick cattle. There should always be a bottle of it in the house.

Twenty years ago half of the population of 400,000,000 women and girls in China had crippled feet, but today almost every village has a women's shoe store which displays an attractive array of footwear.

Wife (reading the paper)—"It says here that a London tourist has has had an umbrella for 20 years."

Her Husband—"That's long enough. Ehe ought to return it."

CUTICURA HEALS SKIN TROUBLE

Sore Eruptions Broke Out Over Face, Itched and Burned.

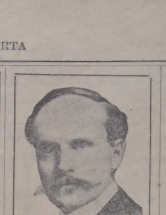
"My trouble began with little pimples on my cheeks which broke out over my face. They itched and burned so that I always expected to be scratching, and soon I scratched them they got larger and then developed into sores. They were very red and very ugly.

"I tried other remedies but they did not help me. I had the trouble about two months when I began using Cuticura Soap and Ointment, and in two weeks I was entirely healed." (Signed) George W. Hershuk, Box 135, Chipman, Alta., Oct. 8, 1923

Daily use of Cuticura Soap, with touches of Cuticura Ointment as required, keeps the skin fresh, smooth and clear. Cuticura Talcum is an ideal toilet powder.

Sample Each Free by Mail. Address Canadian Depot: "Cuticura, Ltd., Montreal." Sold throughout the world. Soap 25c. Ointment 25 and 50c. Talcum 25c.

Cuticura Soap Shaves without mug.



BEAUDRY LEMAN, General Manager Banque Canadienne Nationale

Director Shawinigan Water and Power company; Montreal Tramways company, and Asbestos corporation. Born, Montreal, Jan. 2, 1878, son of Dr. Joseph Beaudry Leman. Educated Mount St. Louis College, private tutor, University of Lille, France, McGill University. Mayor of Shawinigan Falls, Que., from 1901 to 1907; member Electric Service commission, Montreal. Married to Caroline Beique, daughter of Hon. F. L. Beique, May 12, 1908. Have three sons and two daughters. Address 597 St. Catherine Road, Outremont, Quebec.

Any Woman Can Look Stylish

By MAE MARTIN

Most stylish looking women know many ways to make last season's things conform to this season's styles. Thousands of women do this easily they can transform a dress or a blouse, or coat, by the quick touch of home tinting or dyeing. With true, fadeless Diamond Dyes, which are so easy to use, the "know-how" is in the dyes. Diamond Dyes don't streak, fade, spot or run. Only Diamond Dyes produce perfect results. They have been perfected by over 50 years' experience. Insist on them and save disappointment.

"Color Craft," my big new book of dollar-saving hints, will be sent you FREE. Write Mae Martin, Diamond Dyes, Windsor, Ontario.

Canadian Amateur Golf Championship

Will Be Held at Jasper Park Lodge Next Year From August 19 to 24

Authentic information was received at Jasper National Park by the visiting Senior Golfers from Great Britain that the Dominion Senior Individual Amateur golf tournament will be held next year over Pebbles Beach Golf Links, from August 19 to 24. With these dates now definitely assured it is also possible to state positively that the Canadian Amateur championships will be held over the Jasper Park Lodge golf course next year from August 19 to 24. The defining of these two important dates in the golfing program for 1929 leaves an interval of a full week between the Canadian and U. S. Amateur events, and it is more than likely, therefore, that the Canadian championships will attract a large number from the gallery of stars in the United States and other countries who will be westward bound for the U. S. event. Should these dates be fulfilled every effort is to be made by the Royal Canadian Golf Association and the Canadian National Railways to enable them to fruition, the 1929 Canadian Amateur championship will be the greatest event in the history of golf in Canada.

To Aid Farm Workers

Clearing House to Furnish Winter Farm Employment May be Established

While no definite decision has been reached yet, a central clearing house, from which British miner-harvesters will be furnished with farm employment may be located in Regina. The establishment of such a bureau, though not necessarily in this city, is expected to be the outcome of a conference held at the Parliament Buildings, Regina, on September 12, attended by representatives of the Federal and Provincial Departments of Colonization, those of the two great railways, the Government Labor Service and the United Farmers of Canada, Saskatchewan section.

Tenderfoot Dealer (after several futile suggestions): How would just a simple "Come Home" do for an inscription?

The Widow: I guess that will be all right. It was always the last place he ever thought of going.

"My mother-in-law is staying with us this week."

"She's your house guest?"

"Sure, did you think she was staying in the garage?"

Speaking of serious reading, how is this from the bank, "Your account is overdrawn."

Minard's Liniment for sprains.

Billiards In Olden Days

Original Game Was Played On Ground With Players Kneeling

The game of billiards has undergone considerable transformation since it was first introduced. The game first became fashionable when recommended to Louis XIV, by his doctors. In the early Eighteenth Century the table was square, with three pockets only on one side. In the middle was set up a small arch of iron, and beyond this was a mark, called the King, and the player had to drive the mark without upsetting either. By a statute not very ancient (Stat. 30, Geo. II.), billiards was declared to be an unlawful game in England, and it was an offence, punishable by a fine of ten pounds, to keep a table in a public-house. The original game, which seems to have been a kind of croquet, was played on the ground, the players kneeling.

We have often wondered, in our innocent way, whether the inventor of the telephone booth also designed the breakfast nook.

China's new warship is called "Peace." Hereafter it will be conceded that the Chinese understand a joke.

Good-bye Asthma. Persons suffering from that extremely trying trouble known as asthma know what it is to long with all their hearts for escape as from a tyrant. Never do they know when an attack may come and they know that to struggle unaided is vain. With Dr. J. D. Kellogg's Asthma Remedy at hand, however, they can say good-bye to their enemy and enjoy life again. It helps at once.

What would really have settled the whole thing is for Mr. Kellogg to have written into his peace pact that no nation engaged in war could borrow money of the United States.

A torch has been devised that can cut steel in a sunken ship at any depth.

Woodpeckers and literary critics make their living by picking holes in things.

The case with which corns and warts can be removed by Holloway's Corn Remover is the strongest recommendation. It seldom fails.

Donates Holstein Herd For Scientific Work

U.S. Woman Gives Cattle For Experiments In Cure For Goitre

Mrs. Ruth Hanna McCormick's Holstein herd, one of the finest in the mid-west, has been turned over to science seeking a preventive cure for common goitre.

Since July 1, the herd of Mrs. McCormick, Republican nominee for congressman at large, has been the subject of experiments conducted under the direction of Prof. George W. Cavanaugh, head of the department of chemistry at Cornell University.

By feeding powdered seaweed to the cows the scientists have produced milk with an iodine content sufficient to serve as a preventive and possibly as a cure for goitre, Prof. Cavanaugh announced.

The Poor Man's Friend.—Put up in small bottle that are easily portable and sold for a very small sum, Dr. Thomas' Eclectric Oil possesses power in concentrated form. Its cleanness and the varied uses to which it can be put make it the poor man's friend. No dealer's stock is complete without it.

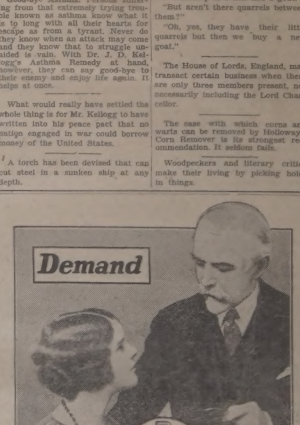
"What are you doing now?"

"I have found a new circus turn—the friendship of a lion and a goat."

"But aren't there quarrels between them?"

"Oh, yes, they have their little quarrels but then we buy a new goat."

The House of Lords, England, may transact certain business when there are only three members present, not necessarily including the Lord Chancellor.



The whole world knows Aspirin as an effective antidote for pain. *But it's just as important to know that there is only one genuine Aspirin.* The name Bayer is on every tablet, and on the box. If the name Bayer appears, it's genuine; and if it doesn't, it is not! Headaches are dispelled by Aspirin. So are colds, and the pain that goes with them—neuralgia, neuritis, and rheumatism promptly relieved. Get Aspirin—at any druggists—with proven directions.

Physicians prescribe Aspirin; it does NOT affect the heart

Aspirin is the trade mark (registered in Canada) indicating Bayer Manufacture. While it is well known that Aspirin means Bayer, to protect the public against imitations, the Bayer Cross will be stamped upon each Bayer tablet. Advt.

British Government Makes Proposals For Huge Settlement Plan

OTTAWA.—As the outcome of the Canadian tour of Lord Lovat, chairman of the British Overseas Settlement Board, the British Government has made a proposal to the Canadian Government which if more than 100 families would be settled upon Canadian farms in the next 10 years. The actualdetails of this, the greatest of all settlement schemes ever to be placed before the Canadian Government, were worked out by Lord Lovat and forwarded by him to Hon. Robert Forke, minister of immigration.

The details would not be divulged as the immigration department here, as it has been agreed to keep everything secret. However, it is enough to outline it is understood that the Lovat scheme provides that 20,000 settlers, mostly heads of families, are to be settled upon Canadian farms within ten years. These men need not necessarily be drawn from the agricultural class, but will all have had a specialized training, in training schools in Britain.

From time to time thousand controllers are to be erected in Canada and the new settlers, upon their arrival will be placed in these cottages. They will be there for a sufficient time, from three to four years, to accumulate savings of $500 and farm experience, when they will be given a farm. Each settler will be assisted to the extent of $2,500, to be used either for payment on property or in purchase of equipment. The total outlay will cost approximately $4,000,000 and this money must be found by the government.

The settler will pay for his farm in 20 years and the interest rate on the mortgage will be six per cent.

In regard to the financing of this huge enterprise, the scheme is quite unusual.

The Canadian department of immigration, through the land settlement branch or a subsidiary corporation, will issue land bonds bearing interest at 4½ or 5 per cent. The bonds will be secured upon the land which is purchased for purposes of resale to the settlers. The bonds will be guaranteed by the British government as to principal and interest.

It is said that the British government desires, however, to limit its liability to ten per cent, but this is not the proposal here.

Odd Accident To Airplane

Making Forced Landing Was Carried Out Over Lake

LONDON.—An airplane forced landing at Black Lake, Que., in which the pilot and four passengers escaped uninjured, has been reported to the board by the Canadian Transcontinental Airways.

Engine trouble forced down a plane piloted by F. Vachon. A skiff was made to land on the ground but the momentum carried the machine out on the lake. A serious accident was only avoided because it was of amphibian type it was stated. The left wings of the air craft were slightly damaged.

Royalty In Talking Film

Balmoral, Scotland.—The King has just seen a film for the first time in the talking films and apparently enjoyed the experience considerably. His Majesty, together with the Prince of Wales, was phonofilmed recently while reviewing the troops on the Horse Guards' Parade at Whitehall.

Prince Speaks Native Language

Nairobi.—The Prince of Wales amazed natives here by addressing them in their own tongue when he was presented with a photograph of himself taken with a number of chiefs. The Prince spoke in the native Kikuyuhi dialect, which he had recently studied en route here.

Premier King Returning

Ottawa.—Premier Mackenzie King will sail for Canada on or about the 19th of this month, according to word received here. He will probably be accompanied on his return journey by Hon. C. A. Dunning, minister of railways; and Hon. Raoul Dandurand, government leader in the senate.

Honored Canadian Minister

Paris.—Premier Mackenzie King of Canada, gave a dinner, Oct. 2, in honor of Hon. Phillipe Roy, first Canadian minister to France. The dinner was also tendered as a graceful compliment to Madame Roy, whose birthday it was.

Finds Lost Scout

Windsor, Nfld.—Col. Collins, South African delegate to the Empire Parliamentary Association, discovered W. Mouncy, missing Canadian scout of the Boer War, whom Collins has been seeking all over Canada, resides at 1226 27th Avenue, Vancouver.

A new astronomical observatory is to be erected at Sultajohnden, about ten miles from Stockholm.

Turned Adrift In Leaky Boat

Quebec Liquor Commission Inspector Threatened With Death By Captors

Montreal.—Joseph A. Patry, Quebec liquor commission inspector, was kidnapped by bootleggers at Riviere Du Loup. He managed to reach shore by paddling his craft with an old piece of wood.

Patry was instructed to probe suspected illegal transportation of liquor by boat to New Brunswick, and with two companions set out for a large gasoline yacht which was anchored a short distance from the Riviere Du Loup wharf. The inspector managed to stumble aboard, but before his assistants could mount the boat, the yacht's engines were started and headed out into the middle of the river, Patry tried to draw his revolver, but his arms were seized from behind and he was warned he he raised an outcry he would be killed, and his body thrown overboard.

Later on the officer was lowered into a leaky rowboat and left to his fate. The matter has been reported to the authorities.

Fire Takes Four Lives

When Farm House Near Brandon Was Completely Destroyed

Brandon, Man.—Four persons were burned to death and one fatally, when Mr. or Alex Wilson, near Moore Park, Man., was destroyed by fire.

Those dead are Mrs. Alex Wilson, Mervin Wilson, their son, and Miss Sarah Wilson, Mr. Wilson's sister.

The fire was discovered by J. M. Harrison, a neighbor, when he was awakened by the reflection of the flames upon his windows. He put on his clothing and rushed out to discover that the Wilson house was on fire. He was then too far away to get at the time to permit rescue work.

W. E. Mann, general storekeeper at Moore Park, father of Mrs. Wilson, was also quickly on the scene, but the heat was so intense that he could not get near the building.

All of the bodies were recovered. The cause of the fire is a mystery. The house, garage and other buildings on the farm were unharmed.

General Allenby In New York

British Hero Honored By Official Salute Of 17 Guns

New York.—Field Marshal Sir Edmund H. H. Allenby, so-called last British soldier conqueror of the Turks in Palestine and Egypt for the British, was welcomed on his arrival here for the American Legion Convention to be held soon in San Antonio.

Arriving on the liner Majestic with Lady Allenby, the general was received an official salute of 17 guns from the army reservation on Governor's island as the city's reception committee marched in from the liner to the battery at the Southern tip of Manhattan Island.

The British hero spoke of the growing tendency toward "open diplomacy" among nations but saw no sign of the great armaments at present.

"I do not believe there is anyone in the world who does not want peace if they can get it," he said, "but we must be ready for and prepare for war, as you do not keep burglars out by leaving the door unlocked."

Major Godfrey Returns

Brings Motor Of Big Seaplane Which Was Wrecked In Crash

Edmonton.—Major A. E. Godfrey, noted Canadian airman, whose recent crash in the northern wilds attracted Dominion-wide attention, arrived in Edmonton recently from Peace River accompanied by Sergeant-Major Graham, one of his three companions on the flight which ended in the Peace River.

Major Godfrey brought with him the motor of the big Fairchild seaplane which he and companions had been remained behind to salvage from the wreckage of the machine. The motor was forwarded to Ottawa.

Find Victim Of Plane Crash

Port Angeles, Washington.—The body of Dr. E. Holden, of Victoria, B.C., one of the victims of the ill-fated Victoria-Seattle plane which disappeared while en route to Seattle, August 29, was found on the Angeles harbor. The body was headless and badly broken. It was the fourth body of the seven in the plane to be found. The plane itself has never been located.

No Demonstrations Allowed

Jerusalem.—The district commissioner of Jerusalem has refused to permit the orthodox Agudath Israel to hold a festival procession on the occasion of Succoth and has also banned a Moslem religious demonstration. It was stated that the government would prohibit any religious manifestation in Palestine.

Exhibit For Royal Winter Fair

Saskatchewan Will Send Fifty Of Its Best Horses

Regina.—Fifty horses, the pick of the Clydesdales, Percherons and Belgians in the province, will represent Saskatchewan at the Royal Fair, Toronto, in November, it was decided at a meeting of the livestock board held recently.

While many selections have yet to be made, both in horses and other classes, the board has definitely decided that the following will exhibit:

Clydesdales.—The Experimental Farm at Indian Head, the University of Saskatchewan, John Falconer, Govan, and Mrs. W. H. Bryce, Dome Lodge, Argyle.

Percherons.—C. M. Rear, Regina; Robert Weir, Weldon; George Dean and Sons, Stoney Beach.

Belgians.—C. M. Rear, Regina; Robert Thomas, Grandora, Andrew Kellan, Goodeve.

In the horse exhibits from this province there will be 20 Clydesdales, 15 Belgians and 15 Percherons. Many other exhibitors are yet to be named.

Will See Air Liner Arrive

Canadian Engineer Going To Lake-hurst To Represent Dominion Air Board

Ottawa.—Wing Commander E. W. Stedman, chief Canadian aeronautical engineer, will view the arrival of the German air liner Graf Zeppelin at Lakehurst, N.J., as representative of the Dominion air board it is learned.

Mr. Stedman examined the big ship this summer when in Germany and discussed the flight with Commodore Eckner and other officers who will be in charge of the aircraft.

Special attention will be given to the methods used for mooring the immense craft to the mooring mast 250 feet in height is being constructed by the Canadian government at the flying field at Roberts, Que., and some important elements may result from Mr. Stedman's observations.

TO INVESTIGATE MARKETING OF CANADIAN WHEAT

Winnipeg.— Conditions surrounding the handling of the wheat crop are the main concern at present of W. R. Motherwell, federal minister of agriculture, who was here in connection with ministerial business.

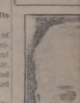
Immediately following his arrival in the city, Mr. Motherwell went with the Board of Grain Commissioners to the Grain Exchange for a meeting with the inspection staff. He spent a half hour in personally inspecting the handling of grain there. The minister indicated that investigation into matters pertaining to the marketing of Canadian wheat was in progress, partly as a result of complaints which he had heard in the different parts of the country, he visited, keeping a sharp lookout for methods which might be applicable in Canada, and opportunities for marketing of Canadian products. He found in the British Isles a strong sentiment for empire products, built, he is sure Canada was concerned, on proven quality. He intimated that Canada could market four or five times as much dairy produce as at present production, and exporting the surplus over consumption.

While in Winnipeg, Mr. Motherwell plans to visit the Dept. Research Laboratory at the Agricultural College, and he will consult the members of his staff in the various branches of the department here.

Farmers To Hold Meeting

Saskatoon, Sask.—Some 400 farmers who specialize in the breeding of horses, cattle, sheep and swine will gather in Saskatoon on January 22, 23 and 24, when the Saskatchewan Livestock Association, with all its sections, meets in annual convention. Meetings will be held in the King George Hotel here, and there will be numerous meetings on the different aspects of stock farming in the province.

POLICY IS CRITICIZED



Lord Cushenden, whose foreign policy on behalf of Great Britain is denounced by David Lloyd George as "one of the most veiled subserviences to France."

Believes River Under Control Of Dominion

Hon. N. W. Rowell Says Federal Rights Not Limited To Tidal Waters

Ottawa.—The Dominion parliament has authority to declare the existence of a public right of navigation over any river navigable in fact. Before the Supreme Court of Canada, Hon. N. W. Rowell, K.C., counsel for the Dominion, made this further contention on the question of federal and provincial control respecting navigation and water ways.

"If a public right to navigation does not exist, as Ontario suggests, on the Great Lakes and the western portion of the St. Lawrence, Mr. Rowell proceeded, "then under the British North America Act and the powers of the Dominion in regard to navigation and shipping, the Dominion must have power to take action in the interests of having a national highway for trade and commerce in Canada. My contention is that the Dominion has absolute control over navigation and shipping."

Killed By High Power Wire

Sudbury Couple Received Full Charge Of 4,000 Volts

Sudbury, Ont.—A man and his wife met death by electrocution in their home while neighbors who looked helplessly on. Frank Gravaerts, Pearl street, and his wife, were the victims.

The man had been attempting to remove a piece of discarded radio aerial wire from a power line carrying 4,000 volts. He was using a mop and a broom handle for his dangerous task when the end of the wire flew up, the end touching his wrist and his wife immediately caught hold of him and she too received the full force of the terrific charge of electricity.

They died clasped in each other's arms.

First Freight Has Reached Flin Flon

Five Tractors Have Been Delivered At Mile 83

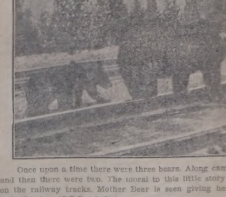
Flin Flon, Man.—Following the passing of the last spike on the Flin Flon Railway, freight has started to arrive by train and the first load, consisting of five tractors with tracks and attachments, has reached Mile 83.

There are now 15 tractors hauling freight in and out of the big mine here, where it is further shipped. 40 tractors is expected in the near future and by freezeup roads to Island Falls should be in shape to stand the heavy traffic which will cross them during the coming winter.

To Open Office In Peru

Ottawa.—G. R. Stevens, Canadian Trade Commissioner in South Africa, has arrived in Canada en route to Peru, where he will open a new office with jurisdiction over Peru, Bolivia and Ecuador. Prior to his departure for South America, Mr. Stevens will visit manufacturing centres of Canada in connection with Canadian exports to his former territory.

A VERY GRIM TALE



Once upon a time there were three bears. Along came the Trans-Canada and there were two. The moral to this little story is—do not trespass on the railway tracks. Mother Bear is seen giving her sons an airing at Lake Louise. (C.P.R. photo.)

Opposes Renewals Of Entente

Ramsay MacDonald Thinks Alliance With France Is Unwise

London, Eng.—At the recent Labor conference, Ramsay MacDonald made an important speech, saying, "We must orient our diplomatic policy anew. I say that, without enmity to France, it is not good for France or for us that we should re-establish any sort of alliance."

France is bound to take notice of this declaration of British policy from the leader of the opposition. The country has not yet any clear knowledge as to whether the present government is re-establishing the alliance with France, but unpublished agreements as to armaments on land seem to imply a new entente.

Ramsay MacDonald proposes to drag a declaration from the government when parliament meets next month. There are reports that the French government will immediately publish all correspondence on the naval side of the agreement. The understanding as to land forces is said to have been expressed only verbally.

Arrest Train Bandit

Robber Of Ontario Mail Car Offered No Resistance

Windsor.—Three hours after a mail car had been rifled of Canadian currency estimated at about $40,000, John Gibbs, 20, said to come from Los Angeles, Cal., was arrested by local police on the Detroit River train ferry and landed in the goal here. According to authorities here Gibbs admitted his guilt. When taken into custody he was carrying two pistols but offered no resistance to the officers.

The robbery was a most daring one, the bandit locking the two mail clerks helpless at the point of a revolver while he calmly looted the car.

Adheres To Peace Pact

Soviets Deposit Note With State Department At Washington

Washington, D.C.—Soviet Russia has joined the other European nations in signing to the Kellogg-Briand treaty for renunciation of war. A document formally signifying Russia's adherence has been deposited with the State department by the French embassy, acting on behalf of the Moscow government, the United Press learned.

State department officials declined to discuss in the slightest the document, but said it was placed with the original copy of the treaty. Officials intimated it would not be made public.

Zeppelin Makes First Trip

Paid Friendly Visit To England and Returned To Berlin

Berlin.—After paying a friendly visit to England the new German dirigible Graf Zeppelin returned to Berlin. As the huge airship soared over the city in the bright sunshine thousands flocked to the streets and saw it describe a graceful circle around Wilhelmstrase. Flowers for President Von Hindenburg, attached to a small parachute, were dropped and the airship passed over Executive Palace, but they were carried six blocks beyond the building.

SASKATCHEWAN POOL ELEVATOR SYSTEM EXPANDS

Regina.—An extensive program of country elevator expansion was announced from the head office of the Saskatchewan Wheat Pool in a statement issued by R. J. Moffatt, managing director of the pool, in part as follows:

"It is anticipated that with the completion of elevators now under construction by Saskatchewan Pool Elevators, Limited, the country grain handling facilities of the members of Saskatchewan Wheat Pool for the 1928 crop will include more than 960 country elevators, with an average capacity of between 30,000 and 35,000 bushels each. This number compares with 707 country elevators in operation for the 1927-28 crop year, in addition to 223 elevators for the current year.

"All told, there have been 740 points in the province where there has been approved by the board of directors as points at which Saskatchewan Pool Elevators, Limited, should secure Pool grain handling facilities, either by construction, purchase or lease of a country elevator. Of this number Saskatchewan Pool Elevators has acquired 104 new country elevators by construction; 76 elevators have been secured either by lease or purchase; 19 elevators are at present under construction; and 41 new houses have yet to be built, of which 30 will be located at sidings on new railway lines. Three elevators have been rebuilt at Pool points where elevators were lost by fire, and three purchased elevators have been rebuilt.

"I do not believe there is anyone in the construction department of Saskatchewan Pool Elevators, Limited, has, in addition to supervising the mechanical operation of elevators constructed 19 new elevators with its own crew."

Empire Party Was Well Pleased With Reception In Canada

Fire Destroys Castle Of Viscount Lascelles

Property In Irish Free State Mass Of Ruins

Portumuna, County Galway, Irish Free State.—Portumuna Castle where elaborate arrangements were made for the approaching visit of the owner, Viscount Lascelles and his wife, Princess Mary, was burned to the ground.

Civic guards and soldiers made a futile effort to bring the blaze under control. The main portions of this Portumuna Castle were built in 1927, and the recent fire attacked the remaining parts of the castle and the outbuildings.

During the night 25 tons of hay on another estate where Viscount Lascelles had planned to visit also were burned. It is stated the visit of the couple to Portumuna may be postponed.

Would Make Travelling In Empire Easier

Plan To Abolish Passports From One Part To Another

Toronto, Ont.—A campaign for the abolition of the requirements of the British Government that British-born travellers going from one part of the British Empire to another should possess passports is being started by the Canadian Steamship and Tourist Agents' Association, the association decided recently.

Members of the Association are confident that, in this move, they have the sympathy of the travelling public, who have to "abide by "this unnecessary trouble." They will endeavor to bring to bear upon the British Government through the department of External Affairs—sufficiently strong evidence to have this class of passport eliminated.

Harvesters Have Good Year

Men Returning East With More Money Than Usual

Winnipeg, Man.—Harvesters returning to eastern Canada are taking home with them more money than is usually the case. Many are taking this exceptionally fine weather which has favored the operations and to the prolonged season of harvesting because of the unusually heavy crop.

The men returning by tens and hundreds, some to eastern Canada and some to Great Britain, are well satisfied with the money they have made. Canadian National officials said recently that several had expressed their intention of returning to become permanent citizens of the West.

Has Narrow Escape

Kansas City, Kansas.—The life of Sandy Powell, 4-months-old baby, who was attempting to crawl across railroad tracks, was saved when an approaching train was halted just as the front end of the engine rolled over the boy. Rising suddenly to see what the fuss was about, the baby suffered a slight bruise on the head struck his head on the lower part of the engine.

Mining Office At The Pas

The Pas, Man.—Establishment of a government mining office at The Pas has been announced by Hon. A. A. Stewart, minister of the interior. It will be under the direction of C. C. Cain of Alberta. Fred V. Seibert and A. L. Cumming, engineers of the department, are in charge. The office is in the Bank of Toronto building.

For Hurricane Relief Fund

Washington, D.C. — Contributions to the West Indies hurricane relief fund his reached more than $4,000,000, the Red Cross announces. Nearly $3,000,000 more is needed to make up the $5,000,000 request.

Would Establish Canadian Mint

Sydney, N.S.—Delegates of the Empire Parliamentary Association have bade their farewells to Canada. "We have been treated like princes. We have been received like old friends," exclaimed Viscount Peel, chairman of the delegation, addressing a final dinner given by the Canadian club and city of Sydney. And in his words of farewell and gratitude were added those of representatives from every parliament in the Empire.

In their journeyings through Canada, Lord Peel felt, members of the British delegation had been able to remove misconceptions. It had been thought in some quarters apparently that the Empire marketing board was an instrument for pushing British goods on the markets. In reality it was designed to push Empire goods in the British market and not cast fell on the British taxpayer. It had been thought, in some quarters, that the unemployment insurance, introduced in the dole, was demoralizing charity. In reality the employee paid his share to a fund and was entitled as of right to his insurance benefit when the curse of unemployment fell upon him.

"We have heard it suggested," Lord Peel added, "that we desire to load Canada with inefficient unemployed.

"I repudiate with all my force this infamous suggestion, but there are, I am convinced, great opportunities in Canada, with good organization, for substantial numbers of suitable and willing workers from our country who will form a fine type of Canadian citizen. We further discussed the opportunities for the extended investment of capital from Great Britain and the wider conditions and our speakers have laid stress on the necessity for accurate information in that field, so as to be no disappointment to the investor.

New Province For Canada Suggested

Would Consist Of Districts At Head Of Lakes

Fort William, Ont.—It is expected here that a public meeting will be called any day to consider the question of separating Northern Ontario and formation of a tenth province.

A similar proposal was a few weeks ago but when the present discussion is again being urged in this district.

Thunder Bay, Rainy River and Kenora districts would form the new province making up in area what they lack in present population.

Dr. Hodgins, of the Ontario legislature, in the Dominion, advocates of secession are willing to move their allegiance from Ontario to Manitoba.

A body of young business men is behind the movement which so far is confined to the north of the city. Citizens in Port Arthur and other centres, however, are said to be willing to join the proposed campaign.

Aged Indian Chief Dead

Valleyvista.—An Indian chief whose age was given as "somewhere near" 130 years was mourned here by four sons, each of whom is over 90 years old. The aged leader was Manual Portes, chief of the Santa Rosa Indians.

Eliminate Level Crossings

Toronto.—With the object of eliminating every level crossing in Ontario the provincial department of highways is having an official report made on every point where railway lines cross one of their highways.

Nurses For Labrador

Montreal.—Two nurses, Misses Canny and Cole, have left Quebec for Labrador, despatched there by the Federal Minister of Health. They will act as outlying stations of Harrington and Muttoan Bay.

Hon. W. D. Euler Issues Denial of Charge Against His Department

Ottawa.—Hon. W. D. Euler, minister of national revenue, has issued a lengthy statement dealing in detail with a certain charge reported to have been made by R. H. Pooley, attorney-general of British Columbia against the department which Mr. Euler administers.

Mr. Euler declares that his department is attempting in all sincerity to co-operate with the provinces in the enforcement of their liquor laws and that not in a single instance have licenses for breweries or distilleries been granted when provinces were opposed. The minister deals specifically with the shipment of a carload of whisky from the distillery of Goodersham and Worts to which, according to news reports, Mr. Pooley made special mention.

"The charge that the Dominion Government is deliberately violating its own law for the benefit of the liquor interests is utterly untrue," Mr. Euler declares. "Such a statement could show a poor lack of knowledge of the true situation and a quite apparent disinclination to accept our offer of co-operation. I cannot believe that Hon. Mr. Pooley made such a charge."

The minister suggested that if the British Columbia attorney-general had any fault to find with the Department of National Revenue it would have been fair for him to address his complaints to the department rather than to issue statements to the press.

Compulsory Marking Of Eggs

Buyers in England Would Know Product Was Canadian

In consideration of the fact that there is apparently a growing demand in the British Isles for Canadian importations of agricultural products —especially butter and eggs, the Minister of Agriculture and Fisheries of the United Kingdom has now recommended through the committee appointed to deal with such work that an order in council should be made prohibiting the sale of eggs in foreign countries exported to England unless they are marked.

The regulations as so marking are that every egg shall be marked distinctly in ink in letters at least one-sixteenth of an inch high. Every egg shall bear that mark—the name of the country from which the eggs are to be shipped. This information was received from a bulletin issued by the Saskatchewan Department of Agriculture.

Further this report states, the moving for such an action is to assure the buyers of the Old Land that they are getting products which have been produced in the United Kingdom. There is undoubtedly a growing demand for this trade, and in view of the fact that the Dominion government have recently taken steps to make such restrictions as will invariably raise the standard of the Canadian product, there is every likelihood of there being a huge increase in the trade in agricultural products in the near future.

The increased interest on the part of the consumers should be appreciated by Canadians, this report intimates, in the view of the fact that up to date the exports of such commodities have been rather low as compared with other countries in the Empire or without.

"This action was taken by the Empire Marketing Board to safeguard the egg consumers of the Mother Country to buy Canadian products, and that the risk of marketing them with indestructible ink so that the finance of the country would not be destroyed even after the egg was boiled, and to protect their own natural desire to patronize Empire products," quoting this report further.

Figures showing Canada's exportations to the United Kingdom for July this year show the following results: Canned poultry was exported to the value of $2,060; butter to the amount of 4,485 cwts.; and eggs to the value of $47,165, as compared with a total importation value of eggs to the United Kingdom of $5,825,670.

Fish From Northern Lakes

Thousands of Pounds Shipped From Alberta to Eastern Cities

The map of Canada is being rolled back so far as the economic handling of fish from the Canadian lakes is concerned, according to the progress made in the shipment of Lake Athabasca trout and whitefish to the big markets at Chicago, New York and Toronto, says the Financial News. The fishing being carried on by two companies at Lake Athabasca, in Alberta, constitutes the most northerly commercial operation in Canada, its extent which is indicated by R. T. Redd, Federal Inspector of Fisheries, who on his recent return from an inspection trip stated that 62,000 pounds of trout and 4,000 pounds of whitefish were taken from the lake in the first three days of the summer fishing season.

First Grain Shipment to Spain

The first shipment of grain from Montreal to Spain left the other day —201,132 bushels. Wheat shipments to foreign countries last year amounted to 118,227,726 bushels from Montreal, but not a single bushel was exported to Spain among the seventeen countries to which grain was consigned. It is said to be the first shipment of grain ever made to Spain.

Canada Has Extinct Volcano

Geologists Working in B. C. Say Eruption Occurred 300 Years Ago

Less than 300 years ago Canada possessed an active volcano, is the opinion of explorers who have been studying the mountain north of Alice Arm, in the northeastern section of British Columbia.

The volcano, according to authorities, is now definitely extinct and there is now no danger of further eruption. There were apparently two pronounced eruptions which have left their traces. The first was separated by a period long enough to allow the lava to cool. The first explosion blew out a crater some 500 yards in diameter. After a period of quiescence sufficiently long to form a hard and level floor in the crater there was a second eruption which formed a cone or scoria of cinders, within the original crater, 300 feet long with a diameter of 150 feet deep. It was from the base of this cone that the lava flow proceeded.

From the volcano the lava flowed down a creek valley in a stream 300 yards wide until it entered the valley of the Texas River. Crossing this level it formed a delta, dammed the stream, forming or enlarging a lake nearby. The lava here turned north and continued down the valley of the Texas in a stream 2,000 feet wide, as far as the Nass River. By the time it reached the Nass the lava had lost much of its fluidity and, the great river was not dammed, although the lava spread over the flood plain, for a short distance.

Indians living near the extinct volcano say that the last eruption was about 300 years ago, but geologists discovered trees 170 years old growing on the edge of the lava. They place the date of the eruption at about 300 years ago.

"We ought to be ashamed of it. Digging ourselves into the mud and breeding lice in the trenches, crawling about under the water and sinking each other's vessels is no occupation for gentlemen.

Cost of Raising Dairy Heifers

Record is Kept at Experimental Station in New Brunswick

An accurate record of the cost of raising dairy heifers was kept at the Fredericton, New Brunswick, Experimental station. One lot of three heifers including one Ayrshire and two Holsteins, ate their natural desire to patronize Empire products," quoting this report further.

Figures showing Canada's exportations to the United Kingdom for July this year show the following results: Canned poultry was exported to the value of $2,060; butter to the amount of 4,485 cwts.; and eggs to the value of $47,165, as compared with a total importation value of eggs to the United Kingdom of $5,825,670.

Claims Astonishing Discovery

Prospectors Report Finding City Of Dead In California Desert

The San Francisco Examiner says two more prospectors have returned there with a story of having discovered a "city of the dead" in the Mojave desert, which is a continuation journey from San Francisco, adding, that University of California scientists practically said the tale was incredible.

The newspaper said the self-styled discoverers are G. A. Howard, Mrs. Howard, and Hoke King, prospectors, and that Howard claimed to have discovered the ruins by following a three-mile subterranean passage found while working a desert claim.

Mummified remains of at least 200 persons of Mongolian type were recovered, some seated as if they had been feasting when stricken by some catastrophe, while others seemed to have been meeting at a human sacrifice, with a mummified victim, a young woman, lying on the altar with her heart removed, Howard is quoted saying he was partially overcome by gas while exploring the ruins, adding that he brought out with him some trinkets from stores seen in the ruins.

New Seed Cleaning Plant

The Saskatchewan Registered Seed Growers Limited have arrangements under way for the establishment of a warehouse and cleaning plant at Saskatoon, it is announced by F. W. Townley-Smith, of Lashburn, one of the directors of the organization. The capital decision in the business in seed grain is necessitating this move, Mr. Townley-Smith states. At present there is a warehouse and cleaning plant at Moose Jaw, this being the only one in the province.

"Digging is a good hobby for a middle-aged man," says a doctor. But why does he so often call it golf?

In 1927 the output of Canadian mines was valued at $183,927,256.

English bank rate remains unchanged.

STRATFORD-ON-AVON FESTIVAL COMPANY

Members of the Stratford-on-Avon Festival Company photographed on board the White Star liner Laurentic on which they arrived in Montreal recently. The company will make a tour of the principal theatres in Canada and the United States.

Scientist Denounces War

Always Leaves Something To Be Settled, Says Sir Oliver Lodge

Sir Oliver Lodge's recent discussion on war created considerable attention throughout England due to the scientist's strong language.

"War is ugly, disgraceful, dirty, objectionable business," he said in a presidential address to the Federation of Southern Counties Brotherhood.

"We ought to be ashamed of it. Digging ourselves into the mud and breeding lice in the trenches, crawling about under the water and sinking each other's vessels is no occupation for gentlemen.

"Disputes must be taken to somebody that settles them. War does not settle anything, but leaves something to be settled."

Russian Colony in Paris

Refugees Fleeing From Bolshevism Accepted Work in France

The Russian revolution added to Paris a foreign colony which now contributes more to the flavor of the city than any other alien group. France was the first European country to offer wholesale asylum to the millions of the Russian nobility when they poured across their borders ahead of the Bolshevik terror. France offered these gently born and recaled people work, and they accepted it eagerly. Some 300,000 eventually established themselves in France, about one-fifth of these in Paris.

Conditions Have Changed

The pioneer who came to Canada 100 years ago, cut all his bridges behind him. He spent his last cent to get here, hundreds of miles of forest and stream divided him from the coast and there was a six weeks' ocean voyage after that. The only way out was to work, by work for thirty, forty, fifty years and some day he might revisit his homeland at his own expense.

What is thought to be the world's biggest tortoise arrived at the London Zoo recently. It weighs about 300 pounds, is three feet six inches long, and is nearly 100 years old.

Made Fortune in Northland

Prospector Taking Trip for First Time in Thirty-Three Years

Hector Morrison, from the river camp, at Keno, Yukon Territory, is bound for the outside world for the first time in a generation.

Morrison has prospected back in Woodstock, Ont., and many of them he has not seen since the beginning of the present century. Others have been born and grown up since he went away in the spring of 1895 to seek his fortune in the northland.

Morrison was there for the first gold stampede and in 1896 he camped on the site of Dawson, which was to become the hub of the mining universe. Since then he has lived continuously in the Yukon, following placer mining in the Dawson district until 1918, when he went to Keno and staked a quarts claim the following year.

"Yes, I've enough of the world's goods to keep me from worrying," scientist Morrison, who cleaned up a fortune when he sold his holding to the Trondhuell Yukon Limited. "But I'm not quitting the Yukon. I'll never feel rich enough for that. Money can't always buy happiness and I'll be happy only in the north."

Six months of civilization Morrison thinks, will be enough. Then he'll hit the northern train again.

Has Record Production

Eggs Laid By Alberta Hen Average Two and a Quarter Ounces

An R.C. White Wyandotte hen belonging to Thomas Hill and Sons, of Penaka, has just completed a trap nest record of 243 eggs in 365 days under government supervision. But more remarkable than the figure, which was beaten by another bird in this record-of-performance flock with 299 eggs to her credit, is that fact that the 243 eggs averaged 2¼ ounces, that she weighs seven pounds now, and although a heavy producer her type and plumage please the fanciers of show birds. A refusal of $75 offered indicates that this queen of Alberta poultry yards is not for sale.

It is astonishing how ready even a mean man is to pay a debt when he discovers that he owes it to himself.

No Waste in China

People Are Extremely Careful and Make Things Last Indefinitely

As a nation we are rather inclined to be unmindful of waste. The Chinese are just the reverse. They waste nothing, and seem to have the knack of making household ware, for instance, last indefinitely.

As a result of this craze for economy crowds of tinkers, cobblers, and menders of all kinds are able to earn enough money to supply their few needs.

A mender of china ware is called Hon Koli, and through the streets he wanders in his happy-go-lucky way, seeking work. Across his bare shoulders is suspended a box of tools at the end of a long bamboo pole, and as he goes he cries out his calling in its affixil sounds.

Every now and then a door opens and the owner of the house gives the Pao Koli some dishes or other household crockery to mend. A look of content spreads over his face, for he depends largely on his customers for his morning and evening bowls of rice, which to him mean all the difference between happiness and the reverse.

He sits down then and there quite oblivious of the fierce sun that beats down upon him while he performs his task.

Canadian Cattle for Australia

Shipment of Purebred Stock to be Sent from Brandon, Man.

The Australian government has just completed a deal for eighteen foundation heifers and two bulls from J. A. McGregor and Sons, the well-known Aberdeen Angus breeders of Brandon. The animals will be selected from Mr. McGregor's Glenesmoch herd by the head herdsmaster of the Australian government and shipped by the Canadian Pacific Railway by way of Vancouver. This shipment, apart from some purebred dairy cattle for the Colony from British Columbia, is said to be the first exportation of purebred cattle from Canada overseas.

He: You say your dress is a sample?

She: Yes, don't you like it?

He: To be sure; but when do you get the dress?

May Not Need Assistance

No Reason To Think Birds Cannot Fly Atlantic Without Aid

In the September Contemporary Review the English ornithologist T. A. Coward, begins an article by asking: "Can a bird without human aid cross the Atlantic?" Earlier authorities, Saunders among them, did not believe that migrating birds ever made the Atlantic passage without resting on shipboard, but Mr. Coward, formerly a doubter himself, says: "I believe that not only is it possible for many species, but that it is repeatedly undertaken, though probably not willingly." A lapwing ringed at Ullswater in May, 1926, was recovered at Bonavista, Newfoundland, in the end of December, 1927. Three years earlier two kittiwakes, ringed on an island off the Northumberland coast, were picked up from Newfoundland. But these birds are of the gull species and sleep on the water. Lapwings in considerable numbers were seen in Newfoundland, distant from Cork, 1,730 miles, within a few days after violent northeasterly gales in the British Isles. A theory is held that their destination was Ireland, and that they were blown south of it quite unwittingly in flight to Newfoundland. Doubtless the weak of wing fell into the surges of the Atlantic. Scores of swallows, flying south in the great storm on the Atlantic coast last week, were picked up dead in the Barnegat region.

When we consult Chapman, our foremost ornithologist, we learn not only that many species cross many miles of the Gulf of Mexico easily in migrations north, but that the golden plover traverses the Atlantic from Venezuela to Nova Scotia and crosses the Pacific from North America to Hawaii, a flight of more than 2,000 miles. Mr. Coward draws the reasonable conclusion: "How little we know, how much there is to learn, and how foolish it is to say that a bird cannot do this or that when any day we may discover that it is our knowledge, not the bird's power of flight, which is at fault."

Has the Right Idea

Another Welsh Miner Finds Canadian Conditions Most Satisfactory

"If you treat the farmer as man to man you will treat the miner like Canada and this is where I am going to stay." Thomas Hamilton, young Welsh miner who uttered these words in the Canadian National Railways Colonization office at Winnipeg, landed in Canada on the same day started to work on a farm near Cereal, Alberta, on the 23rd. "Canada's good enough for me," he said. He was out here in '27, prospecting in the Yukon with the hope that through the gold rush to the Klondyke, and afterwards returned to Britain. But he always advised me to go Canada. I've come at last.

He told me that the first twelve months would be the hardest but I can't say I've found them very hard. I've come home to what I call a real farm. My employer, Mr. R. E. Riddell, drove 30 miles to a dance and brought me back with him, and I met Dempsey-Tunney fight in the movies. I was used to hard work in the mine, so I didn't mind that, so long as I had comfortable lodgings. It seems to me that the chaps who didn't do well are those who either won't or can't work."

Hamilton is going back to Ebbwvale, South Wales, to see his father before he settles down in Canada. Since he came out here this summer his mother died, and he is the only son. His father, an examiner in the mine, is the son of two Scotchmen who once again. "I'm going back to Mr. Riddell's place in the spring." the young man was announced, "and before very long I hope to be farming for myself."

London's Automatic Phones

London's fourth automatic telephone exchange has just been opened at Bermondsey, the first three having been Holborn, Bishopsgate and Sloane. Two more will be completed this year and twenty automatic exchanges, and several are to be opened shortly.

First Shoes Were "Straights"

The "made in Canada" shoe first appeared in 1807. For several years Canadian-made shoes were in the form of "straights" and it was not until 1858 lefts and rights were introduced into Canada's shoe industry. As late as 1900 "straights" were still manufactured in Canada.

"My dear child," said a woman to a young unmarried acquaintance, "you must realize that when one loves it should be for life." I know what I'm talking about. I've been married three times."

Mistress (to maid): Mary, what's ever is the meaning of this? I've found my best silk stockings in your trunk.

Mary: Fancy that now, and all the time you thought you'd lost 'em!

He: "My wife left me without any reason."

She: "Indeed, I felt sure somebody had left you without it."

Greater London's population has increased by more than 2,000,000 in the past 30 years, according to statistics just released.

Planning Against Air Attacks

Considering Means to Counteract Effect of Gas Bombs in London

Novel measures to counteract the effect of deadly gas-bombs dropped by aeroplanes on London in possible future wars are being considered, but such expedients as are suggested would cost enormous sums and would provide only a small measure of protection against such a destructive force as could be launched, judging by the recent mock air attack that London experienced.

Emergency supplies of gas masks for every man, woman and child would be one measure of safety. Another would be the installation at every air-inlet of the ordinary hoods of "seals" of chemical antidotes, which would render each house gas-proof. A third precaution is the training of special gas squads, men wearing gas proof clothing and masks and equipped with a spraying mechanism to lay and neutralize gas clouds in the streets.

And the provision of "community" dugouts is suggested by subsidizing every air-inlet of the ordinary hoods of "seals" of chemical antidotes, which would render each house gas-proof. A third precaution is the training of special gas squads, men wearing gas proof clothing and masks and equipped with a spraying mechanism to lay and neutralize gas clouds in the streets.

And the provision of "community" dugouts is suggested by subsidizing every air-inlet of the ordinary house

Reward and Garnet, New Wheat Varieties, Now Holding Attention of Western Growers

Mr. L. H. Newman, Dominion Cerealist of the Experimental Farm, returned to the East recently from an extensive tour of Western Canada. During the trip practically every wheat growing area was visited. Mr. Newman states that the newer wheats, Reward and Garnet, are holding the attention of the western growers.

Some 467 farmers are this year testing Reward wheat. The variety is reported to have done well though actual figures on yield, etc., have not yet been compiled. Mr. Newman stated that it had been impossible to determine anything definite with regard to this variety's rust resisting qualities because there was practically no rust in Manitoba and very little elsewhere. Conditions generally in the west Mr. Newman describes as distinctly above the average.

Particularly good are the reports on Garnet wheat, one of the originations of the Experimental Farm. Writing on the subject of this remarkable wheat early this year, the Dominion Cerealist stated "the history of Garnet wheat is almost an epic in the realm of scientific achievement. It reveals a story of almost half a century of patient but determined effort, replete with discouragements and disappointments but rewarded ultimately by definite and indisputable gains."

In 1914 Garnet wheat was included in the regular variety test-plots at the Experimental Farms. In 1916 it was tested at the Experimental Farms in the Prairie Provinces. In 1925 the branch farms were able to sow 250 acres, from which was produced about 9,700 bushels.

In 1926, some 6,954 bushels of Garnet seed were offered to prairie farmers, with a four-bushel limit. Some 2,826 farmers, including 902 soldier settlers, secured two to four bushels lots and this, together with seed from increasing test samples by two or three seed growers, made a grand total of about 14,000 bushels, or enough to seed 12,000 acres.

This year Garnet wheat was observed growing in all parts of the west. The section east of Prince Albert and north of Tisdale is practically a Garnet country. It is an early maturing variety, and produces a high proportion of grain to straw. This season serious frost in Saskatchewan on August 31st caused the immature wheat, but Garnet demonstrated its ability to mature before the frost. It usually requires a day or two before Ruby, from six to twelve days ahead of Marquis, and three or four days before Reward. This variety has also behaved well under drought conditions.

In 1903 it was reported wheat would never grow in the Peace River country. This year Garnet was being cut here on August 21. Crops were more advanced in the Peace River district than further south, and some of the west's finest crops were seen there. Dr. J. H. Grisdale, Deputy Minister of Agriculture, and Mr. L. H. Newman, driving through the Rio Grande section of the Peace River on August 22, noted 30 fields with 31 varieties of wheat, and of these 16 were Garnet, 7 Marquis, 5 Huron, 1 Reward, 1 Ruby and 1 Renown.

This indicates the way in which Garnet wheat is spreading in the west. As an early maturing wheat of good yielding it has no equal, and once more the Experimental Farm Branch of the Dominion Department of Agriculture will be credited with an epoch-making contribution to Canadian agriculture.

Not Worth Noticing

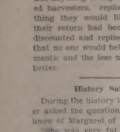
Bruce Walker, Director of European Emigration for Canada in England, when asked in London, if he had anything to say about the returned harvesters, replied that everything they would likely to say on their return had been so admirably discounted and replied to in advance that no one would believe their statements and the less notice taken, the better.

History Said So

During the history lesson the teacher asked the question, "What do you know of Margaret of Anjou?"

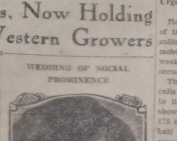
"She was very fat, sir," answered one lad. This was true to the teacher, and he asked for the lad's authority.

"It's in the book, sir: 'Among Henry's stoutest supporters was Margaret of Anjou.'"



"With this awful snow I cannot hide from my wife that I have been drinking!"—Pele Mele, Paris.

WEDDING OF SOCIAL PROMINENCE



Hon. Robert Forke, minister of immigration, has just announced the marriage of his daughter, Ethel May, to Charles F. McFarland, formerly of Los Angeles and now of Vancouver, the marriage having taken place in Vancouver recently.

Winnipeg Newspaper Union

Fashion

224

Looking Slender

An unusual one-piece dress, cleverly designed to make its wearer appear narrower and slimmer, is the front portrayed to be cut apart to show contrasting fabric or color, as illustrated. A narrow belt, attached at either side of front panel, holds in fulness through the waistline and ties in youthful bow at back. The shaped collar is detachable. Binding, flattering square neckline. Style No. 224 is designed in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust, and if made of one material, only takes 5¾ yards of 40-inch. Printed and plain silk crepe, crepe satin using the two materials, printed and plain chiffon, printed and plain linen, two tones in flat silk crepe, jersey, sheer woolens or canton-faille crepe are usually pleasing combinations. Pattern price 25 cents in stamps or coin (coin preferred).

We suggest enclosing 10 cents additional for a copy of our Fashion Magazine.

Planning Western Air Mail

Ottawa, Ont.—Western Canada is practically assured of an air mail service next year. The officials of the Post Office department are putting the finishing touches to their policy which will be recommended to Hon. Peter Veniot, Postmaster-General, and probably by him to the cabinet and parliament.

Editor—It seems to me that some of your verses are not original. Do you ever borrow?

Poet—Well, sometimes. Could you let me have $5?

"Jack, does your wife drive a car all over now?"

"You guessed it, Bill; sidewalks and all."

Level Crossing Accidents

Urgent Need Of Preventive Measures Becoming Imperative

Recent despatches report the loss of three lives in a railway crossing collision between a train and an automobile in Saskatchewan. It is a rare week when similar tragedies do not occur in the Dominion.

The prevalence of such accidents calls public attention to the menace to life of level crossings. Statistics show that 2,000 persons were killed and 175 injured in Canada during the first half of the present year. These are startling figures. The explanation lies in the greatly increased volume of motor traffic in all parts of the country. There is no assurance or ordering the terrible loss of life unless early steps are taken to deal effectively with the crossing menace.

Highways should be either above or below the railway tracks in order to ensure absolute safety for vehicular traffic. This will be a costly undertaking, but will have to come in time. In the meantime injurvued desires for warning motorists of danger should be installed at crossings where it is not feasible to maintain watchmen. It is a situation calling for immediate study on the part of the authorities.

The Railway Board is prepared to co-operate in administering the federal fund for the abolition of level crossings. Parliament has voted $300,000 annually for nearly 20 years to establish the fund. The different provincial authorities have been slow to utilize this aid and a large part of the fund, something like $2,500,000, is still available. It is time it should be devoted to the purpose for which it was voted. Tragical reminders of the urgent need of preventive measures are occurring almost daily.

North No Longer Isolated

Dairy Products Sent To Isolated Trading Post By Airplane

Pioneering has changed what it used to be. Gone are the days when the intrepid settlers kept up their courage on salt pork and hard tack. The change is best described in a message received by J. A. Caulder, general manager of the Saskatchewan Co-operative Creameries, Regina, from D. Campbell, manager of The Pas branch of the company.

The message stated that three woolen boxes. But they represent a consignment of eggs being sent by the Co-operative Creameries via the Western Canada Airways to an out-of-the-way part of Northern Manitoba.

About twice a week four or five cases of eggs, butter, milk and cream are sent through the air from The Pas to Cormorant, a trading post. Some of these are not so far from The Pas as the crow flies, but would require days to reach them by canoe routes or dog team.

Through the air-service business trappers, and prospectors are able to enjoy cream in their porridge, butter on their bread and a fresh egg to top off a breakfast that not many years ago could only have been enjoyed in a settled part of the country.

Foresees Lower Death Rate

Control Of Disease One Factor Says Noted Medical Doctor

The future will see the death rate lowered and life prolonged and that proportion of the population in the age groups from 40 years upwards will be constantly increasing, Dr. Linsy R. Williams, president of the New York Tuberculosis and Health Association, said at a session of the graduate fortnightly meeting of the New York Academy of Medicine.

The noted physician from United States and Europe attended the sessions, the first of their kind ever held in the metropolis.

The present expectation of life at birth is nearly 58 years, Dr. Williams said, "and represents an advance of almost nine years since 1901, he added.

This increase is the result of several fundamental causes, the speaker said.

Outstanding among the reasons given by Dr. Williams was the protection of public health by safeguarding the milk and water supplies and the control of communicable diseases.

London's Narrowest Lane

Middle Temple, said to be the narrowest thoroughfare in London, is being widened at the junction with Brickenden, by a reducing of the north centre foot-way of the latter. This has been done chiefly for the purpose of parking lawyers' cars, not for the convenience for the Temple is a private precinct of Bench and Bar. There is an ancient tree close by the new cutting, which happily has been spared. A smaller and younger one was removed a little while ago.

Cost Of Packing Fruit

It costs 85 cents to pack and sell a box of fruit according to figures compiled by Okanagan Co-operative Fruit Growers. This is prorated into the box, 18c.; labor and nails, 1c.; paper, 8c.; packing, 6c.; overhead and loading on car, 8c.; labor in packing houses, 8c.; label, 1c.; selling, brokerage and incidental costs, 16c.

"On rainy days one realizes within that there are things one can't do without."

Whether Lady Cynthia Mosley and her husband, Sir Oswald Mosley, Labor M.P. for Smethwick, England, will accept the baronetcy made vacant by the death of Sir Oswald Mosley is a matter of conjecture. Both scoff at titles. Lady Cynthia is the second daughter of the late Marquis Curzon.

Fort Churchill Harbor

Expropriation Proceedings Under Way to Secure Property

Preliminary arrangements for expropriation proceedings in regard to property at Fort Churchill are under way in Ottawa. Judge H. A. Robson, of Winnipeg, is acting for the Dominion government and the private owners are the descendants of William Beach, well known Winnipeg oldtimer who was at one time a believer in the Fort Churchill terminus to the Hudson Bay Railroad that he bought a large tract of territory at this point many years ago.

The Beach estate owns the narrow strip of land running between the harbor and the sea and it is along the inner shore of this peninsula that the harbor works are being constructed.

Hon. Chas. Dunning decided last year, when Churchill was selected as the port, that no private interests should be allowed to own land there at present, and expropriation proceedings accordingly were begun.

Theory Proved Wrong

Idea That First Born Children Are Cleverest Is Upset

It has often been said that the first born children are the cleverest in the family, but this theory has been upset. An enquiry into seventy-four cases of prominent personalities of the artistic and literary world showed that among them were only ten first-born children. The vast majority were late-born offspring. Frederic Cooper was the eleventh of twelve children; Simone Balme, the youngest son of the parents; Napoleon, Bonaparte, the eighth child; Benjamin Franklin, the youngest of seventeen; Rembrandt, the fifth of six children; Richard Wagner and Wolfgang Amadeus Mozart were the last of seven; Robert Schumann, the fifth, and Franz Schubert, the thirteen of fourteen children.

The Chemin de Fer du Nord has always held first place among French railroads for speed.

Was the masterpiece of the telephone frequently to keep it in sanitary condition.

Wrong Impression of Canada

English Paper Gives Weird Account of Primitive Conditions

The woman's page editor of the Vancouver Province says: "There isn't a Canadian who at some time or other doesn't bemoan the fact that Canada is regarded at the 'Land of Beyond' by English people. Nearly every person has some amusing story to tell of an Englishman who came to Vancouver looking for bears, or Indians, or who showed surprise at the discovery that this country is in no way different from any other ver to a harmless letupe party where the guests regaled themselves on sandwiches, seated on packing boxes or beds.

"No one would argue about the truth of the affair. It may be so, but why a resident of British Columbia should undertake to send letters to England stressing the primitive state of this part of Canada is not understandable. So, perhaps, more education needs to start at home, before we try to impress our importance on other countries."

Life Guard—"How much can you carry?"

Mere Man—"Two hundred pounds."

Life Guard—"Suppose there was a woman out in the water drowning and she weighed four hundred pounds. How could you save her?"

Mere Man—"I'd make two trips."

The park-keeper found a tramp lying in one of the seats. "Get you!" he cried, shaking the man's shoulder. "I'm going to close the gates."

"All right," murmured the tramp sleepily. "Don't slam them, will you."

"Charley Paddock, the famous sprinter, is said to be the world's fastest human being."

"Don't forget Cleopatra. She had a mark that's not to be scoffed at."

THE FIRST MOOSE TROPHY

Bringing out with them ably the first moose shot in opening of the 1928 hunting season. Mr. and Mrs. Oscar Hock, of Miami, treat from La Tuque, Que., at cessful hunt in the Vermillion filter Armand Tremblay. The Hock had an antler spread of from being the largest secured did trophy and was shot in the which the hunting opened.

Shows How British Columbia Was Retained For Canada By Work of Early Pioneers

Wintering Bees Outside

Tells How Bees Are Successfully Wintered Out-of-Doors

At the Central Experimental Farm at Ottawa a large number of colonies of bees are successfully wintered out-of-doors each year. In his report for 1927, the Dominion Apiarist tells how the bees are protected and fed. The cases used are four-colony and two-colony and single cases are also used. In packing, planer shavings are used of which three inches is placed under the hives, four or five inches about their sides, and six inches to eight inches on the top. Thirty-eight colonies were wintered on honey and forty-four on sugar syrup. Of those wintered on honey thirty-two received about 40 pounds each, and eight received deep ones. The bees were able to fly up until November 1 and after February 15. Towards the end of April when the colonies were examined it was found that those wintered on honey were in worse shape than those of the sugar syrup fed group. Eight of the colonies died, of which six received honey and two received syrup. By the tenth of May it was found that in all the live colonies the number of frames was covered by the bees averaged 6.5 per colony.

Britishers Who Stick

Ninety-Five Per Cent of Harvesters From British Have Made Good

Notwithstanding the concentrated efforts of a well-organized even though blatant coterie of Communists, ten thousand British miners came to the prairies, and an unexpectedly high percentage of them are remaining to meet the challenge that is Canada's. That challenge of this year of the Lord 1928 is the same as that which Simon Fraser founded Fort St. James in 1806. The Astorians came and vanished and in 1811 the United States proclaimed her right to the Pacific Coast and Sir George Simpson became the Hudson's Bay Company governor. Three years later, Simpson, to put the affairs of the Columbia district in shape and save it from the United States and from Russia, crossed the country from York Factory, making the journey in 84 days, 40 days less than any previous record, and established the company's headquarters in such a way as to make sure of what he thought should be British territory on the north and south.

Orientals Use Old Papers

Manufacturers of Fireworks and Novelties Find Them Indispensable

Old newspapers may be a problem to you, but to China and Japan they are practically indispensable.

Reports to the U.S. Shipping Board show that old newspapers constitute a large share of the ship's cargoes destined for Oriental ports. One day recently newspapers shipped from Los Angeles alone weighed 5,000,000 pounds.

Oriental firecracker and novelty manufacturers use the papers in their factories. Total shipments of this stuff to the Orient amounted to 70,018,990 pounds, valued at $685,425.

His Act Of Kindness

A teacher was telling her class the story of a shepherd who, finding a boy in the hills without any lunch took off his coat, wrapped it round the lamb and carried it back to the fold, and gave it to his mother.

On finishing the story, she asked the boys if they knew of a similar act of kindness.

After a pause, there came a piping voice from the back of the class: "Please, Miss, I once heard dad say he put his shirt on a horse that was scratched."

Not Allowed to Forget

A fellow who does not often go to the races attended a meeting one day and had his wallet stolen. This fact he was unlucky forced to report to his wife. The story of his misfortune got around and one day a business acquaintance said to him: "Have you heard anything about your wallet?" "Yes," replied the owner viciously, "I have, morning—noon—and night."

Wheat Varieties Now Being Tested

Had it not been for Sir George Simpson, governor of the Hudson's Bay Company, whose historic visit to the Pacific coast a hundred years ago was celebrated recently the province of British Columbia would be in the possession of the United States, and Canada would have no outlet to the Pacific Ocean.

Perhaps this statement, made by Mr. Charles Vincent Dale, president of the Company of Adventurers, did more than anything else to impress on the minds of those gathered at Fort St. James, B.C., for the centenary the importance of the capable of the man who has been called the Cecil Rhodes of Canada. The romance of a century ago was brought vividly before their eyes in a pageant which revealed Simpson's journeying across the wide stretches that ultimately became the Dominion, but all in all, the living picture of the governor and his retinue arriving at the fort could not even indicate the far-reaching effect Simpson's activities were to have in the history of North America.

"Fort St. James in these days," said Governor Sales, "was the outpost of an empire; the visible sign of British occupation, a centre of government." He went on to say that the claims of Spain to all the coast south of the Russian possessions, of Spain's waning but still claims in favor of the United States.

"One American neighbors," he said, "was diligent in evidence that the title was clear to all the south of the Russian possessions. And so it came about that the fur trade and for such men as Alexander MacKenzie, Simon Fraser, John Stuart and Sir George Simpson.

"It was in the struggle between the Northwest Company and the American interest for the country west of the Rocky Mountains that Simon Fraser founded Fort St. James in 1806. The Astorians came and vanished and in 1811 the United States proclaimed her right to the Pacific Coast and Sir George Simpson became the Hudson's Bay Company governor. Three years later, Simpson, to put the affairs of the Columbia district in shape and save it from the United States and from Russia, crossed the country from York Factory, making the journey in 84 days, 40 days less than any previous record, and established the company's headquarters in such a way as to make sure of what he thought should be British territory on the north and south.

Tress Are Doing Well

Reports made by the tree-planting inspectors sent out by the Forest Service, Department of the Interior, during the 1927 season show 53 per cent. of the plantations entered as unused in first-class condition, 14 per cent. in fair condition, and 3 per cent. poor. Of the stock planted in the spring of 1927, there survived 86 per cent. of the seedlings, 95 per cent. of the cuttings, and 94 per cent. of the evergreens.

A—Have you seen the conjuror over in the side show?

B—Now, I suppose it's the usual bumbug.

WORLD HAPPENINGS BRIEFLY TOLD

One of the finest old churches in Moscow, the "Strasney Monastery," is being converted into an Anti-Religious museum.

Leon Vandersluyrt, Belgian bicycle rider, broke the world motorpace record for sustained speed when he rode 74½ miles in one hour.

A report is current in Bucharest that Poland, Roumania and Greece have concluded a military agreement to make a common front against Russia in the event of war.

Thousands of cattle have been drowned in the flood that came after the bursting of the Yser dykes in Belgium and farmers estimate their damage at about $25,000,000.

The Canadian Press was reliably informed that there is no reason to believe that the Duke and Duchess of York contemplate an early visit to Canada, as rumored in Ottawa.

T. Nichols, of the Royal Canadian Mounted Police, Lethbridge, Alta., will receive the imperial police medal awarded by His Majesty the King, according to the Canadian Gazette.

Great Britain and the U. S. have continued for another year their agreement on administrative co-operation for the prevention of smuggling liquor into the United States by ships flying the British flag.

It was reported in League of Nations circles that the Irish Free State, following the example of Canada, is planning to establish a legation in Paris and appoint a minister to France.

The appointment of Jean Knight as French consul to Canada has been announced officially, confirming previous intimations that M. Knight would be sent to Ottawa as France's first diplomatic representative in the Dominion.

Prizes For Well Kept Gardens

List Of Winners Announced By Canada Horticultural

Charles W. Chapin, locomotive watchman with the Canadian Pacific Railways, Steadings, Alta., is the winner of the prize for the best garden in Saskatchewan district of the railways. List of winners in the station gardens competition was announced by G. A. B. Krook, chief horticulturist C.P.R. western lines.

Judging of the gardens has just been completed by Mr. Krook with the assistance of the superintendents of the C.P.R. in the various districts. In each of the four districts one general prize for the best kept garden was awarded; two of the old station gardens and for new visible garden; and special mention made of those considered worthy.

Fourteen prizes were awarded in the Manitoba District; and 12 in the Saskatchewan District. Alberta got 13 and British Columbia 16. Ten gardens in Saskatchewan won special mention.

New Coins For France

Three new coins are to be added to the French currency, and designs for designs has brought out seventy-four plaster models. None of the artists has equivalent the spirit of the modern age with airplanes, factories or machinery, but each has remained firm to the agricultural spirit of France. The models abound in reapers, sowers, doves, horns of plenty, Gaelic figures of crowing roosters, bunches of grapes and rising suns.

Linked To Hudson Bay

The establishment of Prince Albert National Park last year gave Saskatchewan a park of importance. The new reservation has an area of 1,377 square miles in which are to be found some of the finest recreational and scenic areas in the province. This park is linked to Hudson Bay by a chain of waterways which has been used as a fur trade route for more than 200 years.

If a Malay child falls ill after receiving its name it is temporarily adopted by another family, who gives it a different name.

Making the World Quieter

Many Countries Taking Up Crusade Against Unnecessary Noise

Nearly all Europe has embarked upon a anti-noise crusade. In Great Britain, where the noise of the steam hammer and the pneumatic rock drill is confined largely to the principal cities and towns, it is estimated by Professor Henry John Spooner, the well-known engineer and mathematician, that the aggregate economic loss from unnecessary racket comes to approximately $260,000,000 a year. Apart from this financial loss there is, in his opinion, another and incalculable loss due to ill-health and premature death. "I am convinced," he declares, "that without impeding the wheels of progress in any way we could reduce the noise which harasses our ears by anything from 60 to 80 per cent. What a revolution that would be!"

In Paris vigorous steps are being taken to circumscribe the use of motor horns at night. In the past they have made night hideous for all except night owls. But in Madrid and Milan the competition for groups of ten to fifteen animals, and second prize of $20 in the group of five animals, ending in a draw at $160 in prize money. In addition he sold his steers at good prices. Mr. Latta made a gross profit of $48.63 per head on his group of ten, and a gross profit of $58.57 per head on his group of five. C. J. Fraser of Enterprise, won second prize, amounting to $75 for the records made by his carload lot. "Mr. Peters made a profit of $100 a head, as 20 steers were sold at a gross profit per head of $58.26. A net profit of $100 a head, and more, on the other prize winners, B. A. Wright, Drinkwater, won fourth prize in the carload lot, and also fourth for group of five.

Many Planes in Pageant

Thousands of People Attended Air Mail Service Inauguration

The first aerial mail service between Canada and the United States was inaugurated October 1 at St. Hubert aerodrome, near Montreal, where a great flying pageant, in which fifty planes took part, commenced at 9 o'clock in the presence of thousands of spectators. Planes of every size, even every color, Moths, Reid Ramblers, Swallows, Cabin-type, Commercial and Light Mission-Defence Avro Avian, as flown by Hinkler from England to Australia, Leoning Amphibian, Princton Mailwing, tri-motor Ford, and the most interesting of all, three Sisken fighters, participated in the evolutions. The Siskins were sent by the Royal Canadian Air Force, and are reputed to be the most deadly warring machines in existence.

Banff Has Fine Motor Camp

One of the finest motor camps in Western Canada is situated at Banff. The campsite is situated on Tunnel Mountain, one mile northeast of the town and is fully equipped with electric lights; running water, camp shelters, stoves and other equipment for the comfort of motor tourists.

Kritic—Do you think you've improved Richard III" much by rewriting it?

Playwright—Sure. It was way out of date. It's instance, where Richard hollers: "A horse! A horse! My kingdom for a horse!" I have him shout, "A plane! A plane! My dictatorship for a plane!"

"I see you have a sign in your store, 'We Aim to Please'," remarked the irritated customer.

"Certainly," replied the proprietor, "that is our motto."

"Well," replied the other, "you ought to add a little time off for target practice."

Wife (to returning husband at seaside resort): Oh, darling, I'm so glad you've come. We heard that serious illnot had fallen over the cliff, and I felt sure it was you."

Poverty is no disgrace. At least it is better than being a multi-millionaire with chronic indigestion.

Marketing Problems

Better Spirit Between Producers and Dealers Is Necessary

"Producing a crop is one problem, marketing it is a horse of another color," states Hon. W. R. Motherwell, Minister of Agriculture. Complaints had been made in the British Isles and several continental countries in connection with the 1927 crop, he said.

"I believe a more co-operative spirit between the dealer and producer would result in the solution of most of our difficulties," Mr. Motherwell continued. "This would seem to be necessary from evidence suggesting that some of the unfair dealing dealers have been attempting to sail dangerously close to the limit in the matter of the grade and doing more mixing than seems just advisable."

Mr. Motherwell indicated that further investigation would be made in an effort to correct some very unsatisfactory conditions which he reported hampered the marketing of the wheat crop.

With reference to bacon and dairy products British importers were planning their faith in Canada's guarantee of standardization, he declared. Satisfaction with grades was general, but difficulty of adequate supply was essential. He advocated increasing Canada's dairy products four or five times. "Then," he said, "Canada will then occupy a place second to none on the produce markets of the world."

Protect Submarine Crews

Italian Has Invention That May Prove of Great Value

Ceasare Borghetti, inventor of an apparatus for saving the lives of submarine crews in case of danger, has succeeded in interesting the Italian government in his invention and now gives the press some details of his amazing invention.

Signor Borghetti's apparatus consists of several hollow cylinders attached to the sides of the submarine in such a way that they do not impede its passage through the water. The number of these cylinders depends on the number of men in the crew.

The outer chambers are reached by two doors from the interior of the vessel, through which the crew cylinders is another airtight chamber with four compartments holding compressed air.

When the shipwrecked crew is inside the inner chamber and the doors closed, there is a lever released from the outer cylinder which is firmly attached to the sides of the submarine. The cylinder containing the men is then ejected in such a manner that it will float, automatically, to the surface even from a depth of 600 feet.

British Miners Buy Land

Earned Enough During Harvest To Purchase Quarter Section

Two British harvesters who came to Canada to help out the grain crop of Dominion as their home and will remain in Western Canada as farmers, having bought a quarter section of land with the $450 they earned while working in the harvest fields.

The men are Jack Wilson and Fred Hall, both of Lancashire, England. They accomplished the jump from harvest hand to farm owner by pooling their earnings while harvesting, and buying a quarter section of land from the farmer for whom Wilson had worked. The men had $225 apiece, and the sum needed to procure the land was $450. They immediately gave their wages to the farmer, and Wilson left leaving for England to bring back his family and Wein' sweetheart, and will settle down in Canada to become Canadian citizens.

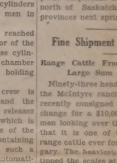
Predicts Late Winter

Winter will make a belated appearance this year, according to Capt. Zashagah Leaming, 87-year-old weather bureau at Wildwood Canada. Wildwood, N.J., who bases his prophecy on the fact that the geese in the vicinity are not flying south, but north. "If the geese fly north in the time of year you can leave the moth balls in your winter flannels for three more months" he said.

They were seated across the table from each other in the restaurant, the wealthy beingroman and the gold digger.

"Will you marry me if I have my health replenished?" he asked.

"I'll marry you, all right," she replied, "but you leave your health the way it is."



Charleston Dance Contest Judged By England's Leader

Miss Leslie—Sutton, chief judge of the Charleston contest for England, seizes the winning position in the dance world today would never have happened if I had not taken care of my health.

I constantly had that tired out, depressed feeling, with sick headache, indigestion, biliousness caused by the poisons of constipation.

Your mild laxative has been of valuable assistance in keeping my system in a daily healthy condition."

NEW HOTEL AT LETHBRIDGE

The Marquis Hotel, Lethbridge, Alta., which has been recently opened to the public, under the management of Mr. A. W. Edwards. The Marquis is fully modern in all its appointments, is a decided asset to the city of Lethbridge, and is proving quite popular with the travelling public. The Marquis Hotel was named after the new variety of wheat of that name, and was built as a community enterprise at a cost of $275,000.

Air Route Laid Out

Emergency Landings and Fuel Stations Located Across To Calgary

Emergency fields have been located and re-fuelling supplies arranged at various points along the Regina-Calgary leg of the trans-Canada airline which will soon be opened for traffic, it was announced by Col. W. A. Wilgress, Ltd., according to information received in Regina through flying circles.

These emergency fields are now being mapped and eventually the scheme is to air-mark the route that men of the air may at all times know exactly where they are in relation to the nearest emergency landing and and emergency fuelling stations.

Winter is expected to be little more of a hazard this summer flying as planes are to be equipped with skids, according to reports received from the company.

Officials announce that it is intended to fly through the winter and arrangements are also being made to acquire the operation of a boat seaplane capable for use in the far north of Saskatchewan and other provinces next spring.

Fine Shipment of Herefords

Range Cattle From Alberta Bring Large Sum in Chicago

Ninety-three head of dry cows from the McIntyre ranch in Alberta were recently consigned to Chicago in exchange for a $10,000 cheque. Cattlemen looking over the shipment claim that it is one of the finest lots of range cattle ever forwarded from Calgary. The thousand-mile trip was skidtipped the scales at 1,700 pounds and the ninety-three averaged 1,350 lbs. These cattle came from one of the few remaining old-time ranches which is running a herd of upward of 5,000 Herefords.

Have Right To Roads

Provincial Highways Are Built To Assist the Farmer

There seems to be a growing impression among motorists that they own the roads. They don't do any such thing. While provincial highways were constructed with a view of making motor traffic more pleasant and faster, they were also built with a view of bettering farm properties and assisting the farmer, who, in a large measure, pays for them.

The farmer has to use threshing machinery, and its transportation over the highways should be just as legitimate as the movements of any other motor vehicle. A threshing machine or tractor, even with flanged wheels, travelling at three or four miles per hour, is not likely to do any 'more, if as much, harm to a highway as a loaded five-ton truck travelling at forty-five or forty miles, as many of them do.—Scottish Expositor.

Power For Flin Flon

Work On Plant Will Re Started This Winter

Operations for the establishment of the proposed power site and the building of power houses and dams at Island Falls, on the Churchill River, for the purpose of supplying power to the mills and mines at Flin Flon will be begun during the early part of the coming winter.

F. A. Kidd, resident engineer in charge of operations at Churchill, states that no person will be allowed to settle within a five-mile radius of the Fort Churchill townsite plot limit, until further notice from the Department of Railways and Canals. Arrangements are being made for the freighting of some 2,500 tons of equipment and supplies to the power site. An air mail service has also been inaugurated.

Foundation For Artificial Silk

Although artificial silk fabric is being made of wood pulp, it can also be made from cabbages, bananas, or any other vegetable matter from which cellulose can be obtained, states an English artificial silk manufacturer.

Parks Increase In Value

Canada today counts her national parks among her increasingly valuable possessions, as they represent one of the finest system of public reservations, from the recreational point of view to be found anywhere.

Say, Chief, can you hear me through this wall?"

"Yes. And in places I can see you through it."—Washington, Ohio.

SUNDAY SCHOOL LESSON

OCTOBER 14

SPIRITUAL GIFTS

Golden Text: "Now abideth faith, hope, love, these three; and the greatest of these is love."—1 Corinthians 13.13.

Lesson: I Corinthians 12-14.

Devotional Reading: I John 4.7-16.

Explanations and Comments

Spiritual Gifts are Diverse, But the Spirit is the Same, 12-4-7—There was rivalry among the Corinthians as to which of them possessed the greatest gift for God's service. "The tendency at Corinth was to exalt the spiritual gifts by their showy rather than their solid character. The reverse was Paul's way.

"The things we consider most remarkable may, after all, be least important. An ecstacy is pleasant, but strength to endure with fidelity is more significant. The touchstone and test of our Christianity is our account of Jesus Christ. If in our souls we own him Lord we are possessed of the Spirit of Life."—John Paterson.

There are different gifts. Paul wrote the Corinthians, but the same Spirit reveals himself in them all; there are different ways of administration, but each of them all is the same Lord; there are different sorts of activities, but they are all worked by the same God. To each one is given his manifestation of the Spirit for the good of others.

Then in verses seven to eleven Paul mentions various spiritual gifts and repeats that, different as they are, they are all the activity of the Spirit apportioning them as he wills. Paul does not dispute the spiritual gifts, he realizes their value, but he realizes also the need for unity and co-operation in the church, and this he enforces in verses 12-30, by his figure of the body and its members; as all of the members are different but essential to the body, so it is with the church and its members.

Descriptive Atlas of Canada

100,000 Copies Distributed to School Children in Old Country

School children in the British Isles will this year receive over 100,000 copies of a descriptive atlas of Canada, provided by the Department of Immigration. This is part of an intensive publicity to induce migration to Canada.

The atlas is distributed free to students in the Old Country, through the central office of the department in London. Agents of the department travel through the country in demonstration vans, carrying exhibits descriptive of Canadian industries, and they lecture at the various schools on the value of the atlas and its use by schoolmasters. Large wall maps are also provided.

The book comprises eighty pages and is stated to compare favorably with the geographies used in Canadian schools. Besides a large number of colored maps, it contains illustrations dealing with the physical characteristics, climate and industries of each of the twenty-five or forty provinces. Special emphasis is placed on the opportunities open to those who wish to settle on the land. The forms in the book have been prepared by the Natural Resources Intelligence Branch of the Department of the Interior, and are stated to be up to the minute in every detail.

The atlas is eagerly received by teachers, officials indicate, and is expected to have very great value in with the increasing desire by young people to look towards Canada as their future home.

Large numbers of the book are also in demand in the United States and thousands of requests for copies have been received from American schools. In congratulating Canadian officials on the excellence of the book, the Governor of the United States geographies used in their schools give a very restricted and often inaccurate impression of this country. The atlas in particularity is destined in the farming areas in the central States.

Engineering Feat a Success

An engineering project, unique in Canadian industry, was declared a success at Port Colborne, Ont., when tests were made of a pipeline by which ground pulp in flush form is carried from a grinding mill of the Canada Bay Paper company, at Current River, to the paper mill two miles north. The tests were highly satisfactory, states the company's management. The pipe is of cast iron, ten inches in diameter, and two miles long.

Quarantine On Trees Lifted

Canadian Christmas trees will be permitted in the United States again this year after a lapse of some time, says the Harrisburg State Department of Forests and Waters. The quarantine which prevented the shipping of the Canadian trees into the United States, because of the Gypsy Moth, has been lifted it was said.

The herd of 709 buffalo bought in 1907 by the Dominion of Canada in Tallow Most, now numbers 16,000.

A Railway Revolution

Train in England Electrifies Line as It Travels

A train which has puzzled many people has been running over a portion of the L.M.S. railway in England, says an article in "Answers."

It looks like an electric train, and the truck over which it has made its journeys is not electrified.

Really, it is an "oil-electric" train, which electrifies the line as it goes along. Its engine-car contains a Diesel oil-engine, which drives generators to supply electric current to the motors. The whole equipment works so simply that there is a saving in labor costs, while the fuel used weighs only an eighth of that required for a steam locomotive.

Here is a real railway revolution. Already exhaustive tests have been made, in Canada, for instance, a Diesel electric train made the distance between Montreal and Vancouver — 2,937 miles—in 67 hours, beating a slow train by 36 hours. Another 334 miles run was accomplished at a speed, on the average, of over 60 miles an hour.

Prince Was Startled

African Warriors Showed Their Liking In Odd Way

The Prince of Wales was surrounded by a whooping band of savages on his tour in Nairobi, East Africa, according to the Daily Mail's correspondent.

The royal party had visited the chieftains of various tribes at a temporary village on the outskirts of Nairobi when suddenly more than 100 half naked warriors raised their shields and spears, shook the high plumes on their head-dresses and rushed directly toward Wales' automobile.

It was, the chiefs explained later, merely a demonstration to show their respect for the Prince but his royal highness got quite a shock.

The warriors surrounded his automobile and danced about for a long distance, shooting, prancing and chanting weird songs as they whirled along the dusty road.

World's Largest Building

Chicago Furniture Mart Heads List With 25,370,000 Cubic Feet

The following buildings are reckoned by their cubic measurements to be the largest buildings in the world: Chicago Furniture Mart, 25,370,000 cubic feet; Equitable building, New York, 14,000,000 cubic feet; General Motors building, Detroit, 20,411,000 cubic feet; Union Trust building, Cleveland, 20,000,000 cubic feet; Railway Exchange, St. Louis, and Illinois Merchant's Bank, Chicago, each 17,650,000 cubic feet; and the Continental and Commercial Bank, Chicago, 13,200,000 cubic feet.

Mrs. Bling: "Why doesn't your husband wear the wrist watch you gave him for his birthday?"

Mrs. Jones: "He's the careless boy neglected the payments and they took it back."

Somebody has discovered in the Himalayas a long-legged sheep that can run forty miles an hour. It would take kind of a fast lamb to keep up with Mary nowadays.

If a huge cistern, large enough to cover Trafalgar Square and as high as Nelson's column, were built as a water-tank, London would empty it twice daily.

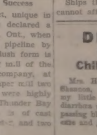
"Can you define matrimony?"

"Yes. You define before you ring a belle, you give your name to a maid—and then you're taken in."

Ships that cannot afford wireless cannot afford crews.

DIARRHŒA
Was So Bad
Child Passed Blood

Mrs. Harry Nesbitt, R.R. No. 2, Simcoe, Ont., writes:—"Last Fall my little boy took very bad with diarrhoea and before I knew it he was passing blood. I went to our medicine cabinet and gave him a dose of



and a little later gave him another, and half an hour after the second dose he got relief and by the time he had taken six doses he was like a different child."

This wonderful bowel complaint remedy has been on the market for over 70 years; put up only by The T. Milburn Co., Limited, Toronto, Ont.

CHAPTER II—Continued.

From then on his exercises and shower-bath, red, but dark eyes shining with the clear glow of health, his step springy and free. Donald was a picture in rugged health and strength. But for all this apparent outward brightness, inwardly he felt rebellious. Douglas' invitation had brought a great thing for the comforts of his past life. Why should he assume the role of a pugilist to eke out his existence? Why wear shabby clothes and even know the pangs of hunger? He had but to wire his father that he was destitute and plenty of money would be forthcoming.

A big steak at "Old Joe's" furnished him a hearty meal. As he counted the money from his meagre supply of cash to pay his check, Old Joe bent his grizzled head forward. "Don't go hungry; come in say time."

"Thanks, Joe."

Donald was in a dark mood. He heard the sound of happy laughter coming from a saloon on the corner. There behind those swinging doors was momentary recess from worldly cares. He stood in the door of the restaurant and looked across the Inlet at the York docks, known as the "Lions," which guard the entrance to Vancouver's harbor. The sun was setting in a glory of red and orange, the clouds became a luminous gauze, and a golden splendor spread over the water. The docks were not suffused in violet, while the snow-fields took on a faint stain of rose. Donald's face glowed as he watched.

"Some country!" he breathed. He turned to catch a friendly smile from Old Joe as he worked over his range. "And some people!" he added fervently.

Once more he turned to the mountains. The night descended and the Lions stood in bold relief against the clear sky. The massive snow-capped peaks seemed to impart a new strength to him. "I'll not quit. I'm going to make good," he said grimly.

CHAPTER III.

While on his daily run around Stanley Park the next afternoon Donald was attracted by a horse and rider making pretty free with them. The rider was interested in a huge white liner plowing her way through the channel, heading a head high. The horse, a noble animal, with full mane and tail, was restive, rocking and prancing in his eagerness to be off.

When Donald lifted his eyes to the rider he saw a beautiful, haughty face with skein of a milky whiteness, a heavy mass of dark brown hair, neatly coiffed under a trim riding hat, and a pair of wonderful brown eyes that suddenly grew cold.

A shower of dirt and pebbles stung Donald's face as the horse was strung about as though on a pivot and with its rider was off like a wind.

"A thoroughbred," he exclaimed, as he watched the rider until she turned a corner in the drive. "Two of them! And she thinks I am a low-down masher," he added ruefully.

That afternoon he went through fifteen pounds of boxing, finishing strong and fresh to tackle pulleys and punching-bag.

Andy was joyful. "It will never go beyond exercise, me lad. That straight left of yours alone would stop 'im in 'arf that time."

"This is my last day of road work," remarked Donald to his friend on Friday afternoon; as he slipped on his running shoes.

As he and Douglas neared Prospect Point Donald's thoughts turned to the girl of yesterday. "She was Douglas' pet, a princess." Unwittingly he had spoken his musings aloud.

"What a that?" queried his companion.

"I was talking to myself," laughed Donald.

"Bad sign! You are either in love or will be if you overtaken you. Too bad!" Douglas wagged his head sadly.

"I may as well tell you," confided Donald; "I saw a Greek goddess mounted on an Arabian charger yesterday."

Douglas threw out his hand tragically. "Donald, my poor friend! I am afraid that I hit you too hard on the head. Now," he said in a voice of mock compassion.

Donald stopped short. "Look!" he cried, pointing excitedly, "there she is!"

"I'll be jiggered!" exclaimed Douglas.

"Don't blame you, but isn't she a peach?" said Donald admiringly.

Douglas burst out laughing. "Do you mean to say that you're in love with a peculiar inflection.

"I told you — a Greek goddess, you —"

"That's my sister, Janet," interrupted Douglas.

Donald's mouth opened. He stared at his friend. "Your what?" he exploded.

"Oh, I forgot! Poor fellow!" said Douglas, shaking his head in mock pity. "Donald, you're going to have a run for your money."

"Donald told him of yesterday's encounter.

"Not a great!" chuckled Douglas. "Come and meet my sister, Donald. I'll tell her that you can't help flirting, and that it will do things up right. I'll call her," He grinned facetiously.

"Don't you dare! You—" Donald warned.

Douglas avoided Donald's wild clutch, ran to the centre of the road and called to his sister.

"Oh, Janet," he shouted.

Donald shook an angry fist at his tormentor and sprang to the shelter of the trees. There was the sound of hoofs, a spattering if gravel, and the sound of creaking leather.

"Oh, Janet, you're just you doing here in that dress, Doug?" asked Janet.

"Quite!" said her brother in a low, mysterious voice. "I've got the fellow that tried to flirt with you yesterday; he's in there." He pointed to the bush. "The poor fellow is a confirmed flirt; has it in its worst form. I beg of you, Sister, be lenient, be merciful. Remember that he's a Greek goddess." He tapped his forehead significantly.

Donald cursed the irrepressible youth's sense of humor. If he could get hold of him — well the things up at the moment he would have pitched him into the Inlet without compunction. But Janet spoke and her tone was full of approval. "What are you talking about, Doug? Have you taken leave of your senses entirely?"

"I will bring forth the erring knight for you to censure," rejoined her brother, bowing low in exaggerated deference. "But," he shouted, as he thrust the woody bower aside, "the goddess awaits thee."

Seething inwardly, Donald tried to appear indifferent as he stepped to the road, but the attempt was a dismal failure. How could one approach a goddess with dignity when ordered in a pair of running trunks, a torn and frayed jersey, socks turned down over a pair of dirty tennis shoes, and unkempt hair or cap? All this added to the fact that he faced a battery of two big brown eyes, who thought him a masher. The goddess motor in the world would fail to register dignity under such conditions. He had a confused remembrance of a jumble of words that went for a formal introduction. He felt his face hot, and knew he was blushing furiously, which did not add to his composure.

The girl looked down curiously, but not without interest, at the embarrassed youth.

Donald dimly mustered courage to glance up at the face above him. The deep brown eyes regarding him held just a trace of humor. The full red lips were parted to show a flash of white, even teeth.

It is a pleasure to meet you even under such inauspicious circumstances," stammered Donald. He turned to glance at the grinning cause of his discomfiture. "I would suggest, Miss Rethnie, that you have that fellow escorted to your home, as I intend to commit mayhem on the person of your brother as soon as you have gone."

(To Be Continued.)

In shipping their choicest teas over land and sea, great tea planters never take any chances of the tea deteriorating in transit. They pack it in aluminum or lead—Red Rose Tea is always packed in aluminum, so it will come to you as fresh and flavory as the day it was blended. 9-37

Teeth and Health

Issued By The Canadian Dental Hygiene Council and Prepared By The Saskatchewan Dental Society

TOOTH TURNS BLACK

Your white pearly teeth have perhaps excited the admiration of your friends and your pride in them is fairly pardonable.

But not one in a tooth that you had been intending to have "fixed" ceased to bother you until by and by you noted with some little alarm that this tooth was quite dark in contrast to its fellows.

Or, perhaps, your dentist because of your urgent need found it necessary to remove the pulp from a tooth, following which operation you found with consternation things had changed color, and noticeably so.

Now, what has caused it?

Contrary to your ideas, possibly a tooth gives its shade, not from the outer enamel covering, which is almost colourless, but from the array of colors in the underlying body of dentine.

As a sequence to pulp death and decomposition, we have a disintegration of the blood elements with the production of pigments or color compounds. These permeate the dentinal structure through the many little tubuli and are reflected through the almost transparent enamel, giving rise to the shade in the pulpless tooth, the principal source of discoloration.

A less frequent cause is from the use of medicinal agents employed in tooth treatment, which may also have the property of staining the dental substance.

Now, unfortunately, as you can see, all of the scouring that you may do is of no avail—like the historic spot of Macbeth's hands, it will not out.

However, your dentist by employing bleaching agents within the tooth may, in the hands of success restore the shade, if the discoloration has not remained too long.

Message Had Its Effect

Houdini Once Assisted Authorities by Fake "Spirit Message"

Houdini's crusade against fraudulent spirit-mongers occupied a great deal of his time and thought during the last years of his life. The fight was a brief period in his early stage career when, assisted by his wife he would "read" and "reading" and "spirit-message" act, faked hocus-pocus, of course.

One night he was tipped off that two notorious local "bad men" were in the gallery. These men were about armed with razors, and three were under orders to "get" Houdini, who was to be murdered. While no tangible evidence could be raised to fasten the crime on these "gun-men" they were often felt that they were implicated.

When Houdini began to give his "spirit-message" act he looked forward with a puzzled, earnest face.

"I have a message here for Bill Donker and Jim Saunders," he said. "It comes from Benny Carter. He says: 'Ex' boys betish put yo' razors away, or yo' is shot goin' ter be where all is hot.' Bill Donker and Jim Saunders present?"

There was an awed silence, and then, at last, Donker and Saunders set a chair and stumbled hastily toward the exit a quavering voice replied:

"Yes, dey is, but dey ain't stayin'."

Great Lakes "Gambling" Season

The "gambling" season on the Great Lakes is near at hand. Stakes that mount to millions and involve the lives of many men are on the play boards of the shippers who soon will be sending their mighty grain and ore carriers to ports that last cargo before the ice closes in, and to stake their ship and the lives of the men against the elements which only last year claimed five ships and victims and cost the lives of 24 men and two women.

Dietitian: "Yes, a few lettuce leaves without oil, and a glass of orange juice. There, madam, that completes your daily diet."

Mrs. Overweight: "Thank you so much, Doctor, but do I take this before or after meals?"

Make it your happiest holiday. Your friends and relatives will be happy then, too, when you tell them of a most enjoyable trip both ways.

Early Completion of Bay Road

Road to Fort Churchill to be Open Year Earlier Than Expected

Major Graham Bell, Deputy Minister of Railways, who has returned to Winnipeg from an inspection of the Hudson Bay line, states that rails will reach Fort Churchill on Hudson Bay by March or April next, one year earlier than was originally contemplated. Major Bell was accompanied by Hon. James Malcolm, Minister of Trade and Commerce.

Construction gangs were now with in 60 miles of the terminus, erecting lines of telegraph wires as they moved. Work would be carried on without cessation throughout the winter as in the summer.

The methods of construction used in building the Flin Flon line will be followed on the Bell announced that in that way time would be saved in the laying of the rails. Bell and Mr. Malcolm made a complete inspection of the Flin Flon line and the Hudson Bay Railway. Major Bell called the Hudson Bay railway the greatest piece of railway construction in Canada. He said if that method of rail laying had not been used on the Hudson Bay line, the steel would not reach Fort Churchill for another year.

On the Flin Flon line, he said, sidings were now being completed, and the line would be ready to carry anything within the next two or three weeks. "It will be ready in time," he said. "The first 50 miles are equal to anything on the prairies."

Sleep is the great nourisher of infants, and without peaceful sleep the child will not thrive. This cannot be got if the infant be troubled with worms. Miller's Worm Powders will destroy worms and drive them from the system, and afterwards the child's rest will be undisturbed. The powders cannot injure the most delicate baby, and there is nothing so effectual for restoring the health of a worm-worn infant.

Recipes For This Week

(By Betty Barclay)

Orange Balls

Soak orange peels three days in cold water changing the water daily; then put in hot water, and boil until soft. Drain, wipe dry with cheesecloth, chop fine, and measure. Take an equal amount of sugar, and for each one-third of a cup of sugar add two tablespoons each of water and butter, and boil until it will spin a fine thread, then add the chopped peel and boil five minutes; cool, put on a board, sprinkle with granulated sugar, and shape into small balls. These may be rolled in coarse sugar and allowed to dry, or they may be dipped in fondant, flavored with vanilla. They are delicious dipped in chocolate with a few grains of orange sprinkled on the top of each chocolate before it hardens.

Tenderloin of Beef Stuffed with Oysters

Large tenderloin.
One pint oysters.
One teacup cracker crumbs.
Salt.
Pepper.
Celery salt.

Split the tenderloin. Season with salt and pepper. Make a dressing with the oysters, crackers, and season with salt, pepper, and celery salt. Spread part of the one tenderloin with dressing. Put the other one-half tenderloin on top. Tie together with string and bake. Baste often.

Stage Manager (to new hand) — "Now then, everything's ready. Run up the curtain."

Stage-Hand — "Wot yer talkin' about? Run up the curtain? I'm a stage-hand, not a bloomin' squirrel."

There is in Fifth avenue, New York, a 12-storey apartment building in which every door knob is gold plated, in one flat every hinge, door handle and key is of gold.

Minard's Liniment—Popular for 50 years.

Isn't it funny how people entirely without principle manage to draw so much interest?

Inspiration From Commonplace Things

Door-Knocker Gave Beethoven Idea for Glorious Concerto

To an ordinary mind it would be scarcely seem possible that much music could be got out of a door-knocker. Yet it was this scene which is said to have inspired Beethoven's glorious violin concerto in D. As the musician lay awake one night staging the concerto in his mind, his musings were interrupted by a belated neighbor who was endeavoring to arouse his housekeeper and get her to com down and let him in. Beethoven heard his persistent knocking for admission—for one deliberate knocks at a time. The constant repetition gave the composer the idea he sought and those four knicks are heard all through the opening movement of the concerto, which begins with four unaccompanied D's on the drum—seemingly as unmelodious and unpromising an opening phrase as one could imagine. In commenting on this work Parratt stances Sir George Grove has said: "those four knocks were to Beethoven what the bulls of Jupiter was to Turner, or the daffodils to Wordsworth—commonplace in themselves but transformed by the fire of genius into an imperishable monument.

A PROBLEM FOR YOUNG MOTHERS

Stomach troubles cause most of the distress of babyhood and childhood, and are the greatest problem that a young mother has to solve. The treatment for these digestive disturbances that make baby peevish and fretful and disturb his sleep must be quick and most effective, and, above all, perfectly safe.

Baby's Own Tablets are a tonic stomach and bowels; banish constipation and indigestion; break up colds and simple fevers; promote that health-giving sleep which is so beneficial to the welfare of the baby or growing child. The Tablets are sold by all medicine dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Carpet Weavers of Persia

Work for Many Years to Turn Out Exquisite Rug

The art of carpet making is a very ancient one, and dates back 2,000 years before the birth of Christ in the country of Persia. It reached its zenith, however, in the sixteenth century, and since then there has been a continuous, if industry. It is for this reason that the tribes have so jealously guarded the secrets of their vegetable dyes and of the patterns which they regard as peculiarly their own.

Wooden posts are driven into the ground in the shape of the plan of the villages of Kerman, and to these is fastened the cross-piece to which the warp threads are tied, according to the number, of 6,000 and girls or marriageable age are then set a definite daily task by the women-kind, whose duty it is to see that there is no falling ok in the quality and rate of output.

Thus, cramped fingers must work at express speed to maintain the average of three hand-tied knots a minute, for in a large, carpet capable for a modern dining-room of 10 feet by 10 feet there may be 6,000,000 knots and sixteen years of accurate labor.

At the same rate, that famous carpet now in the Victoria and Albert Museum, which measures no less than 34 feet by 17½ feet, must have taken two weavers nearly half a century to complete!

That the carpet industry is a paying proposition to the exporters is evidenced by the fabulous prices paid for rare examples. Only recently the sum of $68,250 was bid at Christie's for one pair of small praying rugs, while an American millionaire gave the huge price of $15,000 for a fine "ardassan," or garden carpet. So light and exquisite was the workmanship that, when placed on the scales, he discovered that he had paid at the rate of $5,000 for each pound of softly-tinted fabric!

If they came from a monkey there's nothing you can do about it, but if you are going to the dogs you can defour.

The oldest assembly in the world is thought to be the Welsh bardic congress, the Eisteddfod.

Minard's Liniment for aching joints.

Peace Pact Of Faith

Effect On Imagination Of World Cannot Be Estimated

The Fact does not automatically turn the world into a Garden of Eden. It does not even take us automatically out of Sedlam, but it gives statesmanship a new start; it gives mankind a new hope. It is like the League of Nations. Anybody can point out the weaknesses of the league, describe its failures, analyze its vices; but the man who does not see that the creation of the league has put man's hope for peace and his nobler ambitions on a new basis is blind to the history of human institutions. The Pact is not a mere act of policy; it is an act of faith. Nobody, therefore, can measure its effect on the imagination of the world.

Little Helps For This Week

"Thou hast dealt well with Thy servant, O Lord, according unto Thy word."—Psalms cxix, 65.

Beneath the splendor of Thy choice, Thy perfect choice in the day I rest; Outside it now I dare not live.

Within it I must needs be blest.

—Jean Sophia Pigott.

I would rather be what God chose to make me than the most glorious creature that I could think of. For that is how I have thought of Heaven, in God's thoughts,—and then made by God, is the dearest, grandest, most precious thing in all thinking.

George MacDonald.

A Reliable Thermometer

Great Eiffel Tower Changes Height According to the Temperature

The Central Meteorological Bureau of Paris has verified the height of the Eiffel Tower increases and decreases in height according to the temperature. This is perfectly clear and understandable.

It is added that as a result of this changeableness of the famous tower, due to the weather, "ordinary Parisians have long been accustomed to decide what to wear by a glance at the tower."

Spencer: "Don't you think modern advertising is strictly honest?

Mather: "I do not! Right in that magazine you have there in your hands I can show you a testimonial by a roomful of people listening to a radio, and not one of them is talking."

Scorpions are known to have starved for 368 days, and snakes have existed for 17 months without food.

First Bachelor: "Is there anything in this affair of yours with the heiress?"

Second Same: "Millions, I hope."

Romans Understood Method of Soldering

Sample of Work on Iron Ferrule Discovered in Ancient City

A method of soldering two pieces of iron together with copper was known to Roman artisans in England nearly two thousand years ago.

This is shown by a deep iron ferrule like a modern servulle ring unearthed during excavations of the Roman city of Uricconium, located in the river Severn and destroyed about A.D. 330.

Lead pipe manufactured and laid in Rome's water system 1,800 years ago was recently pronounced to be in perfect condition.

Industry Comparatively New

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. The first papermill in Canada was established at St. Andrews in Quebec, in 1803, and in 1825 at Crosbie Hollow near Hamilton was erected the first paper-mill in what was then Upper Canada. What is claimed to be the first wood-pulp mill in Canada was erected at Windsor Mills, Quebec, about 1870.

Terms Cash.

Dated at Craigmyle, Alberta, this 15th day of August, 1928.

D. L. SLOAN,
Secretary-Treasurer.

40 41a.

For
Swollen Joints

Most remedies fail but Joint-Ease sometimes succeeds.

It's for joint trouble only, whether in ankle, knee, hip, elbow, shoulder, finger or spine—whether rheumatic or not.

It limbers up stiff, inflamed, painful, creaky joints so quickly you'll be astonished.

Two seconds' rubbing and away it goes through skin and flesh right down to the bone and ligaments—that's why it succeeds. Ask any reliable druggist.

TRADE BALANCES AGAIN

Protectionist papers lament that our favorable trade balance is not so large as it was in 1926. Still, they ought to be satisfied. In the last five years the total favorable balance of Canadian trade has reached the grand total of $1,230,-377,409.

The situation may be summed up this way:—

The protectionists claim has always been that under lower tariffs this country would be flooded with cheap goods from other countries and would be unable to sell our own products.

The tariff has been steadily lowered in the last few years, and—

We are selling more Canadian products of all kinds, both abroad and at home, than ever before.

We have the largest per capita favorable trade balance of any country in the world.

If we eliminate the export of cartridges, which reached the enormous total of over $911,000,000 from 1926 to 1920, we will find that adding all the favorable trade balances of all the high protectionist governments between 1879 and 1922, the sum total falls short by over $250,000,000 of the favorable balance Canada has had during the last five years of relatively low tariffs. The facts seem unbelievable—they cannot, however be challenged.

MR. HOOVER'S COMPARISONS

Mr. Hoover spoke in Newark the other day. Mr. Hoover believes in protection. He told his audience that world export trade had increased only 10 per cent. since pre-war times. American exports had gone up 58 per cent. Mr. Hoover attributed this great advance in American exports to the protective tariff. He forgot that nearly all the world has increased its tariff since the war. He was comparing the United States with Protectionist Europe. All his statement meant was that the United States could stand a higher tariff with less injury than any other country in the world.

Canada, however, has not increased its tariff since 1921—it has lowered it. Against the 58 per cent increase of export quoted with pride by the candidate of the Republican Party in the United States, Canada shows an increase in exports of 190 per cent over the 1913 figures. Prices, of course, have advanced since 1914. If we take the 1914 price level and value the exports of 1927 on that basis, we find that American exports (based on pre-war level of prices) are 54 per cent higher than in 1914. Applying the same method to Canadian figures, it reveals an increase of 110 per cent over 1914. It seems very foolish on the part of Mr. Hoover to compare the progress of the United States with other protectionist countries. He ought to compare American exports under high protection with Canadian exports under low tariffs.

Local and District

BORN—On September 26th, at Drumheller Hospital, to Mr. and Mrs. S. A. Elliot, Delia, a daughter.

Mrs. L. Baron and Kenneth are spending a few days in Calgary.

Mrs. F. Anderson left on Tuesday morning for a few days in the city.

Arthur Bowe who is grain buying at Oyen, spent the weekend at home.

Mrs. Wm. Baron left on Tuesday morning for Edmonton.

Roy Anderson made a trip to Calgary the latter part of last week.

W. H. Blaney, who moved to Stavely, Alta., was a visitor here the beginning of the week.

Peter Thompson has received the sad news of the death of his father, in Cumberland, England, at the age of 79 years.

There will be a bazaar and dance held at Sentinel Hill School on Friday, October 26th. See advt. in another column.

J. O. McKee bought Fred Mason's house, and he and Mrs. McKee and family intend moving into town as soon as threshing is finished.

Bob McWilliams, an old-timer in this district, who is now contracting in Calgary, was a visitor in Delia on Sunday. He was accompanied by his wife.

Mr. and Mrs. Fred Mason and family, accompanied by Jack Bryden, left on Thursday last by auto for Windsor, Ontario, where they intend to make their home in future.

The Women's Institute are planning on holding a "Made in Canada Exhibition" on Saturday, October 27th. This should prove interesting in these days of boosting home industries.

The annual Harvest Thanksgiving Service, will be held in the United Church, Sunday, October 4th. Rev. R. W. Griffith, B.A., of Craigmyle will preach. Special music is being prepared. A cordial invitation is extended to all to be present.

Threshing is now about completed and winter seems to have set in with a vengeance. Tuesday night it blew a gale, accompanied with the first snow of the season. At time of going to press the weather was still boisterous and cold, threatening more snow.

The annual Thank-offering meeting of the Wgnes Missionary Society will be held in the United Church on Wednesday afternoon at 3 p.m., October 16th. Miss Florence Capsey, Social Service worker for the W. M. S. in Drumheller, will speak on her work there and elsewhere. All the ladies of the community are invited to this meeting.

We have just received word that Mrs. R. Sargent's brother, Mr. Alfred Staues, died at Buffalo, Alberta, on Monday last, October 8th. His sister, Mrs. Munsey, had arrived in England three day's previous to his death. Mr. Staues, we understand, ran a general store in Buffalo, where Mr. and Mrs. Sargent, who farms in this district, have been residing for some time.

Miss Dorothy Croswoller returned home Monday from the University Hospital at Edmonton, where she has spent the past three years in training. Just as she had completed her examination, Miss Croswoller had the misfortune to be taken by an attack of appendicitis, the operation preventing her from returning for two weeks. However, she is doing remarkably well, after the operation.

On Monday evening, October 15th, the Ladies' Aid of the United Church are having their annual Thanksgiving supper. Tickets are $1.00 per will be served from six to eight o'clock. Following this there will be a programme consisting of addresses by Rev. W. R. Griffith and J. V. Howey, who will give a talk on Scotland, illustrated by beautiful colored slides. There will also be musical numbers by local talent.

Edward J. Wells, F.R.C.I., British journalist, who has been resident in Delia and district for the past six weeks, desires to place on record his appreciation of the generous courtesy of our community. He states that, given the suitable publicity, Delia should increase and grow considerably—believing that the proximity of the Hand Hills is a decided asset in this era of the ubiquitous automobile. Mr. Wells leaves for Vancouver and Prince Rupert, where he will conclude his Harvest and Threshing investigations at the great wheat terminals

10th Fortnightly Crop Report

[Issued by Department of Agriculture, Government of Alberta.]

Edmonton, September 15th, 1928.

Threshing is fully seventy-five per cent. completed throughout the province, and good progress is being made with the remainder, according to telegraphic reports received by the Department of Agriculture for the tenth fortnightly crop report of the season.

Weather conditions during the past two weeks have been generally satisfactory, although in a number of localities light falls of rain and snow have hampered operations to some extent. Grain is moving rapidly to market, and at some country points elevators are reported to be filled to capacity.

Recent reports make it difficult to estimate with any degree of accuracy the damage resulting from frost. In a number of localities and in the case of earlier crops generally injury has been very slight, while in other districts the quality of a considerable percentage of the grain threshed has been lowered from one to two grades, and a material decrease from the anticipated yield is reported.

In the Peace River country the season has been very satisfactory, and grades on the average are stated to be better than for last year's crop. A great deal of fall plowing has been done throughout the province, and this, along with the large amount of land newly broken during the past summer, promises an increased acreage in readiness for next season. Good progress is being made with the harvest of the sugar beet crop in the southern part of the province, and very satisfactory yields are reported.

HAND HILLS ECHOES

Mrs. Bazendale paid a visit to her mother, Mrs. Venus, last week.

We trust that the recent prairie fire, which has been the third one in the Hand Hills, in the last, meaning winter is now coming along. Let's hope that the old axiom "three times and out," proves a true one, as all fields, sheds, etc., have been so dry of late. People cannot be too careful with hot ashes, cinders, and other inflammable material.

Mrs. A. J. Venus and baby are visiting with her folks, Mr. and Mrs. G. Edmonson, of Rainbow.

The community at large extend their sympathy to Mrs. Beck and family in their sad bereavement. Mr. and Mrs. Beck were real old-timers in the Hand Hills, coming here from Ontario over twenty years ago, and taking up a homestead two miles west of Hand Hill Lake.

BUSINESS SUMMARY

(Continued from Page One)

$110,000,000. Gross earnings of the Canadian Pacific and Canadian National Railways from January 2 to September 14th increased $4,374,000 over last year. Building operations have not ceased their activity, contracts awarded in August amounting to $39,448,500, being ten millions in excess of July, while in the elapsed eight months contracts given are 22.8 per cent. in advance of the like period in 1927. The fabrication of steel, consumption of builders' hardware, of cement, paint and heating apparatus go on apace.

Manufacture of motor vehicles gives no sign of having reached a saturation point. In the seven months ending July 31st last, the automotive production of vehicles in Canada was 150,214 cars having a plant value of $97,503,000, as against 137,795 cars of the value of $87,975,000 last year, and Aug 31st the activity of output for home and foreign trade was well maintained.

Newsprint production was larger in August than in the preceding month and than in the corresponding month last year, the output having been 209,656 tons against 184,199 tons in July and 180,166 tons in August, 1927. Operating ratio, however, fell to 78 per cent. of rated capacity, or 2.6 per cent. less than a year ago.

The post of Montreal reflects the general activity of trade, tonnage of ocean vessels arriving and departing being larger than ever before and the grain movement heavy.

Wholesale prices are firm and much business is transacted, prices of Cheese exports from the port of Montreal from May 1st to September 15th have been 132,500 boxes in excess of the like period last year. Changes in the foreign Exchanges sterling has declined to below the import gold point, and sovereigns have been received in Montreal During the month New York funds declined to 9/64 per cent. discount, but high money rates in New York and weak news in sterling caused a reaction to par. Due to a slightly improved investment demand the Canadian bond market has shown a firmer tendency. There have been no new issues of importance.

Great Increase In Immigration

Immigration to Canada for the month of August amounted to 25,940 as compared with 10,242 in August a year ago, an increase of 167 per cent., according to a statement made public Friday by the department of immigration and colonization. This immigration consisted of 12,460 British, 3,581 from the United States, and 9,299 from other countries. The British immigration for August included approximately 8,500 harvesters.

For the first five months of the fiscal year immigration to Canada has amounted to 112,050 compared with 99,964 in the corresponding period a year ago, an increase of 12 per cent. Of this total 40,442 were British, 15,968 from the United States and the remainder from other countries.

Canadians who had gone to the United States to live and who have returned to Canada in the five months of the fiscal year and remained permanently in this country totalled 17,668. The total of such returning Canadians in August was 3,602.

Ontario's gamlise tax is being raised from 3 to 5 cents per gallon.

The Lakeview hotel at Nelson was destroyed by fire. It was unoccupied.

RUPTURE
EXPERT HERE

F. H. Seeley, of Chicago and Philadelphia, nationally famous expert, will himself personally be at the Arlington Hotel, and will remain in Red Deer on Saturday only, October 20th, from 9 a.m. to 5 p.m.

Mr. Seeley says:

"That Hernalite Shield will not only retain any case of rupture perfectly, but will close it, beginning in 10 days on the average case. Have had the pleasure to meet over all-Canada medicals—examined their rupture cases, and was immediately apprehensive and withstanding any statement that might make me sore of location. Large or difficult cases, or long standing cases (full-swing operations) especially solicited. This appliance has been the only award in England and Spain, producing absolute control, surgery, injections, medical treatments or operations, which will relieve the honored patrons of all rupture." *"His Majesty the King of England, Surgeon Sir Edward Shipley, former Medical Director-General, R. N., Etc., Etc."*

This instrument is the same as supplied to Baron Cowdray, Baron Rhondda, Naval Hospital—Capt. R. F., Etc., Etc.

He will be glad to demonstrate without charge and free of devised fee. Anyone demands presents stopping at any time without the slightest pain.

"N. B.—Every statement in this notice has been verified before the Federal and State Courts.—F. H. SEELEY.

CAUTION—All cases should be auditioned under the use of elastic or web truss with understraps, as some rest where this thing is and rest where the opening is, often resulting in strangulation.—Offices, 417 N. Dearborn St., Chicago, Ill.
